- 2 (a) A tennis player throws a tennis ball whose distance of the ball from the ground after  $t$  seconds is  $(6t - t^2)$  m.

How long does it takes for the tennis ball to reach a height of 5 m ?

Seorang pemain tenis membaling sebiji bola tenis dengan jarak bola itu dari atas lantai selepas  $t$  saat ialah  $(6t - t^2)$  m.

Berapakah masa yang diperlukan untuk bola tenis itu mencapai ketinggian 5 m ?

[ 4 marks]
