

KERTAS 2

BAHAGIAN A

ITEM NO	SCORING CRITERIA	MARKS	REMARKS
1(a)(i)	P : Plasma membrane/ <i>Membran plasma</i> Q : Cell wall/ <i>Dinding sel</i> R: Vacuole/ <i>Vakuol</i>		2 3✓ - 2 m 1-2✓ - 1 m 0✓ - 0 m
(ii)	1. P is composed of phospholipids and proteins while Q is composed of cellulose <i>P dibina daripada fosfolipid dan protein manakala Q dibina daripada selulosa</i> 2. P is semi-permeable while Q is fully permeable <i>P adalah separa telap manakala Q adalah telap sepenuhnya</i>	1 1	2
(b)(i)	Tonoplast/ <i>Tonoplas</i>	1	1
(ii)	P1 : When water diffuses into R by osmosis, it will expand <i>Apabila air meresap masuk ke dalam R secara osmosis, ia akan mengembang</i> P2 : and exerts (turgor) pressure on the cell wall <i>dan menghasilkan tekanan (segah) ke atas dinding cell</i> P3: which causes the cells to be turgid <i>menyebabkan sel menjadi segah</i> P4: and provides support in herbaceous plants <i>dan memberi sokongan kepada tumbuhan herba</i>	1 1 1	Any 2
(c)(i)	Translocation/ <i>Translokasi</i>	1	1

ITEM NO	SCORING CRITERIA	MARKS		REMARKS
(ii)	Provides sieve tubes with energy/ATP/proteins/nutrients for transporting the organic substances <i>Membekalkan tiub tapis dengan tenaga / ATP / protein / nutrien untuk pengangkutan bahan organik</i>	1	1	
(d)	P1: The area above the ring is swollen because of the accumulation of organic substances/sugars/sucrose <i>Kawasan di atas gelang menjadi bengkak disebabkan pengumpulan bahan organik/gula/sukrosa</i> P2: as it cannot be transported to the area below the ring because the phloem tissues have been removed <i>disebabkan ia tidak boleh diangkut ke bawah kerana tisu floem telah dibuang</i> P3: The area below the ring will die/stop its growth <i>Kawasan di bawah gelang akan mati/pertumbuhan terhenti</i> P4: since no organic substances/sugar is received to support cells metabolic activity <i>Kerana tiada bahan organik/gula diterima untuk menjalankan aktiviti metabolisme sel</i>	1	3	
	TOTAL			12

ITEM NO	SCORING CRITERIA	MARKS		REMARKS
2(a)(i)	Mitosis / mitosis	1	1	
(ii)	Y → Z → W → X	1	1	
(b)	<p>In animal cell, cytokinesis occurs by constriction of the plasma membrane at the cell equator while in a plant cell, a cell plate is form at the cell equator.</p> <p><i>Pada sel haiwan, sitokinesis wujud dengan pencerutan membran plasma di tengah sel, manakala dalam sel tumbuhan plat sel terbentuk di tengah sel.</i></p>	1	1	
(ii)	<p>P1 : <i>Bryophyllum</i> undergoes asexual reproduction / vegetative reproduction <i>Bryophyllum menjalankan pembiakan aseks / pembiakan vegetatif</i></p> <p>P2: Mitosis takes place (at meristems) along the leaf margin <i>Mitosis berlaku (di bahagian meristem) sepanjang tepi daun</i></p> <p>P3: To produced plantlets/buds which are identical to the parent cell. <i>Untuk menghasilkan anak pokok/tunas yang serupa dengan induk.</i></p>	1 1 1	3	
(d)(i)	45 / 44 + X	1	1	
(ii)	Turner syndrome / Sindrom Turner	1	1	
(iii)	<p>P1: Retarded development of female sex organs/secondary sexual characteristics <i>Perkembangan organ seks perempuan/ciri seks sekunder terencat</i></p> <p>P2: Sterile/Mandul</p>	1 1	1	Any 1

ITEM NO	SCORING CRITERIA	MARKS		REMARKS
(iv)	<p>P1: Chromosomal mutation / a decrease of number in chromosome <i>Mutasi kromosom / pengurangan dalam bilangan kromosom</i></p> <p>P2: The failure of sex chromosome to separate during anaphase I/ anaphase II/meiosis I/meiosis II <i>Kegagalan kromosom seks terpisah semasa anafasa I/anafasa II/meiosis I/meiosis II</i></p> <p>P3: Producing an ovum with no X chromosome/ 22 autosomes <i>Menghasilkan ovum tanpa kromosom X/22 autosom</i></p> <p>P4: Fertilisation with a normal sperm/sperm with 23+X produces a zygote with 45+XO chromosomes <i>Persenyawaan dengan sperma normal/sperma dengan kromosom 23+X menghasilkan zigot dengan 45 + XO kromosom</i></p>	1	3	
	TOTAL		12	Any 3

ITEM NO	SCORING CRITERIA	MARKS		REMARKS
3(a)(i)	Oxygen (gas) / O ₂ / (Gas) oksigen	1	1	
(ii)	To supply carbon dioxide // Membekalkan karbon dioksida	1	1	
(iii)	P1: Increase the power / number of bulb <i>Meningkatkan kuasa/ bilangan mentol</i> P2: Decrease the distance of light sources <i>Mengurangkan jarak sumber cahaya</i> P3: Increase the concentration of sodium hydrogen carbonate solution <i>Meningkatkan kepekatan larutan natrium hidrogen karbonat</i>	1 1 1	3	
(b) (i)	P1: At P /low light intensity, the rate of photosynthesis is low <i>Pada P/ keamatan cahaya rendah, kadar fotosintesis rendah</i> P2: When the light intensity increases, the rate of photosynthesis increases until point Q <i>Apabila keamatan cahaya meningkat, kadar fotosintesis meningkat hingga titik Q.</i> P3: After point Q, when the light intensity increase, the rate of photosynthesis remains constant <i>Selepas titik Q, apabila keamatan cahaya meningkat, kadar fotosintesis kekal malar</i> P4: Carbon dioxide becomes the limiting factor <i>Karbon dioksida menjadi faktor penghad</i>	1 1 1 1	3 Any 3	
(ii)	P1: The rate of photosynthesis will decrease/stop <i>Kadar fotosintesis akan menurun/berhenti</i> P2: (At high temperature), enzymes are denatured <i>(Pada suhu tinggi), enzim akan ternyahasli.</i>	1 1	2	

ITEM NO	SCORING CRITERIA	MARKS		REMARKS
(c)	<p>P1: The rate of photosynthesis will decrease <i>Kadar fotosintesis akan menurun</i></p> <p>P2: (because) stomata are covered with wax <i>(kerana) stoma telah diliputi dengan lilin</i></p> <p>P3: (and) prevent carbon dioxide from diffusing into the leaf // prevent gaseous exchange <i>(dan) menghalang karbon dioksida dari meresap masuk ke dalam daun // menghalang pertukaran gas</i></p>	1	2	
	TOTAL		12	Any 2

ITEM NO	SCORING CRITERIA	MARKS		REMARKS
4(a)	Succession <i>Sesaran</i>	1	1	
b(i)	Zone I : <i>Avicennia</i> sp / <i>Sonneratia</i> sp <i>Zon I</i> Zone II : <i>Rhizophora</i> sp <i>Zon II</i> Zone III : <i>Bruguiera</i> sp <i>Zon III</i>	1	3	
(b)(ii)	F : <i>Avicennia</i> sp / <i>Sonneratia</i> sp / The plants have extensive root systems / cable root systems <i>Tumbuhan itu mempunyai sistem rangkaian akar</i> P1 : The roots trap and collect sediments/ organic matter from decaying plants <i>Akar memerangkap dan mengumpulkan sedimen / bahan organik dari pereputan tumbuhan</i> P2 : As time passes, the soil becomes more compact and firm (which is suitable for <i>Rhizophora</i> sp) <i>Bila masa bertambah, tanah menjadi lebih padat dan keras (menjadikannya sesuai untuk Rhizophora sp)</i>	1	3	
(c)	Density = <u>Total number of individuals of a species in all quadrats</u> Number of quadrats x quadrat area Kepadatan = <u>Jumlah bilangan individu suatu spesies dalam semua kuadrat</u> Bilangan kuadrat x luas kuadrat $= 15 / 5 = 3$ individuals per meter ²	1	2	
(d)(i)	The capture, mark, release and recapture method <i>Kaedah tangkap, tanda, lepas dan tangkap semula</i>	1	1	

ITEM NO	SCORING CRITERIA	MARKS		REMARKS
(ii)	F1 : Emigration rate / <i>Kadar emigrasi</i> P1 : Reduce the population size of the grasshopper <i>Mengurangkan saiz populasi belalang</i>	1 1	2	Any 1 F with corresponding P
	F2 : Immigration rate / <i>Kadar imigrasi</i> P2 : Increase the population size of grasshopper <i>Meningkatkan saiz populasi belalang</i>	1 1		
	F3 : Reproduction rate / <i>Kadar pembiakan</i> P3 : Increase the population size of grasshopper <i>Meningkatkan saiz populasi belalang</i>	1 1		
	F4 : Number of predators / <i>Bilangan pemangsa</i> P4 : Reduce the population size of grasshopper <i>Mengurangkan saiz populasi belalang</i>	1 1		
	TOTAL		12	

ITEM NO	SCORING CRITERIA	MARKS		REMARKS
5 (a)	<p>P1: Process: Ultrafiltration / <i>Ultraturasan</i></p> <p>P2 : The afferent arteriole has a larger diameter than the efferent arteriole causes high hydrostatic pressure in the glomerulus. <i>Diameter arteriol aferen adalah lebih besar daripada diameter arteriol eferen menyebabkan tekanan hidrostatik yang tinggi dalam glomerulus.</i></p> <p>P3: Some of the components/small molecules in the blood plasma are filtered out into the lumen of the Bowman's capsule (forming glomerular filtrate.) <i>Sesetengah komponen/molekul-molekul kecil dalam plasma darah dituras ke dalam lumen kapsul Bowman (membentuk hasil turasan glomerulus)</i></p>	1	2	
(b)(i)	<p>P: 100%/ all amino acids are reabsorbed from X (into the blood capillaries) <i>100%/ semua asid amino diserap semula daripada X (ke dalam kapilari darah)</i></p>	1	1	
(b)(ii)	<p>P1: Coffee contains caffeine <i>Kopi mengandungi kafein</i></p> <p>P2: Caffeine inhibits the release of ADH (from the pituitary gland) <i>Kafein merencatkan rembesan ADH (daripada kelenjar pituitari)</i></p> <p>P3: Distal convulated tubule/collecting duct is less permeable to water. <i>Tubul berlingkar distal/tubul pengumpul kurang telap terhadap air</i></p> <p>P4: Less water will be reabsorbed <i>Kurang air diserap semula</i></p> <p>P5: The volume of urine increases <i>Isipadu urin meningkat</i></p>	1	3	Any 3

ITEM NO	SCORING CRITERIA	MARKS		REMARKS
(c) (i)	<p>P1: Blood (is pumped from the artery in the wrist and) flows into the coiled dialysis tubing <i>Darah (dipam dari arteri di pergelangan tangan dan) mengalir ke dalam tiub dialisis</i></p> <p>P2: The semi-permeable membrane (of the dialysis tubing) only allows small molecules/prevent large molecules to diffuse across the membrane into the dialysis fluid <i>Membran separa telap (tiub dialisis) hanya membenarkan molekul-molekul kecil/menghalang molekul-molekul besar meresap melaluinya ke dalam bendalir dialisis</i></p> <p>P3: The dialysis fluid is isotonic to the blood plasma <i>Bendalir dialisis adalah isotonik kepada plasma darah</i></p> <p>P4: Urea diffuses out from the blood into the dialysis solution due to the concentration gradient/concentration of urea is higher in the blood <i>Urea meresap keluar dari darah ke dalam bendalir dialisis disebabkan kecerunan kepekatan/kepekatan urea yang lebih tinggi dalam darah</i></p>	1	3	
(c) (ii)	<p>P1: The kidney cannot perform osmoregulation <i>Ginjal tidak dapat menjalankan pengosmokawalaturan</i></p> <p>P2: The balance of water and mineral salts in the body//the blood osmotic pressure cannot be regulated. <i>Keseimbangan air dan garam mineral dalam badan//tekanan osmosis darah tidak dapat dikawalatur.</i></p> <p>P3: Blood volume cannot be maintained <i>Isipadu darah tidak dapat dikekalkan</i></p>	1	1	Any 3

ITEM NO	SCORING CRITERIA	MARKS		REMARKS
	P4: (Metabolic) waste products cannot be excreted from the body <i>Bahan kumuh (metabolisme) tidak dapat disingkirkan daripada badan.</i>	1		Any 3
	TOTAL		12	

BAHAGIAN B

ITEM NO	SCORING CRITERIA	MARKS	REMARKS
6 (a)	<p>P1: P is mouth, Q is duodenum and R is ileum <i>P adalah mulut, Q adalah duodenum dan R adalah ileum</i></p> <p>P2: Bread contains carbohydrates <i>Roti mengandungi karbohidrat</i></p> <p>P3: In mouth /P, bread is chewed to break it up into smaller pieces to increase the surface area for enzyme action. <i>Di mulut /P, roti di kunyah untuk memecahkannya kepada ketulan kecil untuk meningkatkan luas permukaan untuk tindakan enzim</i></p> <p>P4: Bread is mixed with saliva which is secreted by the salivary glands. <i>Roti akan bercampur dengan air liur yang dirembeskan oleh kelenjar air liur</i></p> <p>P5: Saliva contain (salivary) amylase <i>Air liur mengandungi amilase (airliur)</i></p> <p>P6 : Which hydrolyses starch into maltose <i>Yang akan menghidrolisiskan kanji kepada maltosa</i></p>	1 1 1 1 1 1	ALL 3 correct answer awarded 1 m

	<p>P7: In duodenum / Q, the pancreatic juice (secreted by the pancreas) contains amylase, (trypsin and lipase)</p> <p><i>Di duodenum /Q, jus pankreas (dirembeskan oleh pankreas) mengandungi amilase, (tripsin dan lipase)</i></p> <p>P8: (Pancreatic) amylase acts on starch to hydrolyse it to maltose.</p> <p><i>Amilase (pankreas) akan bertindak ke atas kanji untuk menghidrolisis kanji kepada maltosa</i></p> <p>P9: In ileum /R, intestinal juice contains maltase, (sucrase, lactase and erepsin)</p> <p><i>Di ileum / R , jus usus mengandungi maltase (sukrase, laktase dan erepsin)</i></p> <p>P10: Maltase hydrolyse maltose into glucose</p> <p><i>Maltase menghidrolisis maltosa kepada glukosa</i></p> <p>P11: Sucrase hydrolyses sucrose into glucose and fructose</p> <p><i>Sukrase menghidrolisis sukrosa kepada glukosa dan fruktosa</i></p> <p>P12: Lactase hydrolyses lactose into glucose and galactose</p> <p><i>Laktase akan menghidrolisis laktosa kepada glukosa dan galaktosa</i></p>	1
