

## SKEMA PEMARKAHAN UD FIZIK KERTAS 2

### KERTAS 2

| Question | Answer  | Mark |
|----------|---|------|
| 1(a)     | The change in temperature of an object // perubahan suhu suatu objek  | 1    |
| 1(b)     | More sensitive // lebih peka  | 1    |
| 1(c)     | Expansion of the mercury / Increase in the volume of the mercury when the temperature increases.// Pengembangan merkuri / Pertambahan isi padu merkuri apabila suhu bertambah   | 1    |
| 1(d)     | Does not stick to the wall / not vapourise / opaque and easy to seen / good conductor / high boiling point // tidak melekat pada dinding kaca/ tidak mengewap/legap dan mudah dilihat/ ia adalah konduktor haba yang baik / mempunyai takat didih yang tinggi | 1    |
|          | Total   | 4    |

| Question | Answer   | Mark   |
|----------|--|--------|
| 2(a)     | Gravitational Potential Energy // Tenaga Keupayaan Graviti | 1      |
| 2(b)(i)  | $M_1 W = F \times s = 80 \times 0.5$<br>$M_2 = 40 J$       | 1<br>1 |
| 2(b)(ii) | $M_1 P = W/t = 40 J / 4 s$<br>$M_2 P = 10 W$               | 1<br>1 |
|          | Total  | 5      |

| Question | Answer  | Mark   |
|----------|---|--------|
| 3(a)     | Pascal's principle / Prinsip Pascal               | 1      |
| 3(b)     | Same / sama                                       | 1      |
| 3(c)(i)  | $M_1 : P = \frac{50}{0.04}$<br>$M_2 : 800 Pa$     | 1<br>1 |
| 3(c)(ii) | $M_1 : F = P A = 800 \times 0.8$<br>$M_2 = 640 N$ | 1      |

|      |                      |   |
|------|----------------------|---|
|      |                      |   |
| 3(d) | increase / bertambah | 1 |
|      | Total                | 6 |

| Question  | Answer   | Mark   |
|-----------|--|--------|
| 4(a)(i)   | Current produced due to cutting / changing of magnetic field // Arus yang dihasilkan disebabkan oleh perubahan / pemotongan medan magnet . | 1      |
| 4(a)(ii)  | There is cutting of magnetic field // Terdapat pemotongan medan magnet   | 1      |
| 4(b)(i)   | North // utara   | 1      |
| 4(b)(ii)  | Diagram // rajah   | 1      |
| 4(b)(iii) | Lenz's law // hukum Lenz   | 1      |
| 4(c)      | <p>Note:<br/>Vertical position of coil- V = 0 amplitude (1M)<br/>Horizontal position of coil- V= max (+ve) or max (-ve)amplitude (1M)</p>  | 1<br>1 |
|           | Total  | 7      |

| Question  | Answer  | Mark |
|-----------|---|------|
| 5(a)      | Heat is a form of energy // Tenaga ialah satu bentuk tenaga | 1    |
| 5(b)(i)   | 5.2 > 5.1   | 1    |
| 5(b)(ii)  | 5.2 > 5.1   | 1    |
| 5(b)(iii) | Volume / Isipadu  | 1    |
| 5(c)      | Directly proportional // berkadar terus                     | 1    |
| 5(d)      | Charles' law // hukum Charles                               | 1    |

|          |   |   |
|----------|---|---|
| 5(e)(i)  | Absolute zero // Sifar mutlak   | 1 |
| 5(e)(ii) | Volume of air is zero // the air molecules is at rest //kinetic energy is zero<br>// isipadu udara sifar // molekul udara pegun // tenaga kinetik sifar | 1 |
| Total    |   | 8 |

| Question | Answer  | Mark   |
|----------|---|--------|
| 6.a      | Diode // Diod   | 1      |
| 6.b.i    | The capacitance of the capacitor in Diagram 6.3 is higher // $6.3 > 6.2$  | 1      |
| 6.b.ii   | The smoothness of wave pattern in Diagram 6.3 is higher // $6.3 > 6.2$  | 1      |
| 6.b.iii  | The magnitude of peak voltage, $V_p$ same // sama   | 1      |
| 6.b.iv   | capacitance of the capacitor increases, the smoothness of wave pattern increases // Nilai kapasitans bertambah, semakin rata corak gelombang  | 1      |
| 6.c      | Full-wave rectification / Rektifikasi penuh gelombang   | 1      |
| 6.d      | M1 Capacitor is charged when the current flow // kapasitor dicaskan apabila arus mengalir.<br>M2 Capacitor is discharged when there is no current flow // kapasitor buang cas apabila arus tidak mengalir | 1<br>1 |
| Total    |   | 8      |

| Question  | Answer   | Mark   |
|-----------|--|--------|
| 7(a)(i)   | Series circuit // litar sesiri   | 1      |
| 7(a)(ii)  | M1 $R = V/I = 3/1.5 = 2 \Omega$<br>M2 $R = 2/2 = 1 \Omega$   | 1<br>1 |
| 7(a)(iii) | Increases // bertambah   | 1      |
| 7(b)(i)   | M1 240 V<br>M2 Voltage same with appliances rating / appliances at normal working/<br><i>voltan sama spesifikasi alat / alat bekerja secara normal</i> | 1<br>1 |
| 7(b)(ii)  | M1: Parallel // selari<br>M2: One not working, others still work/ <i>satu tidak berfungsi, alat lain masih berfungsi</i>                               | 1<br>1 |
| 7(b)(iii) | M1: Thick wire // dawai tebal<br>M2: Low resistance // rintangan rendah  | 1<br>1 |
| Total     |  | 10     |

| Question | Answer                 | Mark |
|----------|------------------------|------|
| 8(a)     | Reflection // pantulan | 1    |

|           |  |             |
|-----------|--|-------------|
| 8(b)(i)   | <p>1. A ray from object parallel to its principal axis, reflects to F</p> <p>2. A ray passing through C, will reflect at the same path, C</p> <p>3. Extrapolation of both rays to form image</p> | 1<br>1<br>1 |
| 8(b)(ii)  | Bigger/ virtual/ besar/ maya/ tegak  | 1           |
| 8(c)(i)   | M1 Convex mirror / kanta Cembung<br>M2 Wider view / Sudut pandangan lebih besar  | 1<br>1      |
| 8(c)(ii)  | M1: Bigger size/ saiz lebih besar<br>M2: Reflect more light / lebih banyak cahaya dipantul   | 1<br>1      |
| 8(c)(iii) | M1: High / tinggi<br>M2: No barrier / tiada halangan   | 1<br>1      |
| 8(d)      | S  |             |
|           |  | Total 12    |

### Bahagian B

| Question | Answer   | Mark                  |
|----------|--|-----------------------|
| 9(a)(i)  | situation where the rate of heat transfer between two objects is zero and the temperature of both object is same, / keadaan dimana kadar pemindahan haba bersih antara dua objek adalah sifar dan kedua-dua objek mempunyai suhu yang sama.  | 1                     |
| 9(a)(ii) | M1 : spesific heat capacity of frying pan M is greater than N / muatan haba tentu kuali M lebih besar dari kuali N<br>M2 : time taken for the water to boil in M is longer than N / masa untuk mendidihkan air oleh kuali M lebih panjang dari kuali N<br>M3 : Change in temperature in M and N are the same / Perubahan suhu dalam kuali M dan N adalah sama<br>M4 : spesific heat capacity increase , the time taken for the water to boil increase. / Semakin besar muatan haba tentu semakin panjang masa yang diambil untuk air mendidih<br>M5 : spesific heat capacity increase , the rate of change of temperature decrease / Semakin besar muatan haba tentu , semakin kecil kadar perubahan suhu. | 1<br>1<br>1<br>1<br>1 |

|      |   |   |
|------|---|---|
|      |   |   |
| 9(b) | M1 Steam cannot goes out because of the steamer is closed. // Stim tidak dapat keluar kerana periuk kukus ditutup<br>M2 The steam condensed on the fish // Stim mengalami kondensasi ke atas ikan<br>M3 The fish absorbs specific latent heat of fusion from the condensed steam // Ikan menyerap haba pendam tentu pengewapan dari stim yang terkondensasi tadi.<br>M4 Water has high specific latent heat<br>M5 Fish can be cook faster // ikan boleh masak dengan cepat  | 1<br>1<br>1<br>1<br>1<br>Max 4  |
| 9(c) | M1 : the pot is made by the material that have lower spesific heat capacity/ <i>Periuk di perbuat dari bahan yang mempunyai muatan haba tentu yang rendah.</i><br>M2 : cepat panas<br>M3 : wall of the pot is thicker / <i>Dinding periuk yang tebal</i><br>M4 : Windstand higher pressure / <i>Dapat menahan tekanan yang tinggi</i><br>M5 : the lid must have a rubber layer / <i>Penutup periuk ada lapisan getah</i><br>M6 : Avoid the leakage of steam / <i>Dapat mengelakkan kebocoran stim</i><br>M7 : the handle is made by the material with insulator / <i>Pemegang diperbuat dari bahan penebat</i><br>M8 : Higher spesific heat capacity / <i>muatan haba tentu yang tinggi / Tidak cepat panas</i><br>M9 : lower mass of the pot/jisim periuk yang rendah<br>M10 : lighter , easy to carry / <i>Ringan, mudah dibawa ke mana-mana.</i><br>M11 : must have pressure released valve / <i>Mesti mempunyai injap pelepas tekanan</i><br>M12 : to released high pressure after cooking / <i>unuk mengeluarkan wap panas bertekanan tinggi apabila selesai memasak.</i><br><br>Semak bebas | 1<br>1<br>1<br>1<br>1<br>1<br>1<br>1<br>1<br>1<br>1<br>1<br>1<br>1<br>1<br>1<br>1<br>1<br>1<br>Max 10 |
|      | Total   | 20  |

| Question | Answer  | Mark             |
|----------|---|------------------|
| 10(a)    | Radioactive decay is the process in which an unstable nucleus becomes stable by emitting radioactive rays.<br><i>Reputan radioaktif adalah proses di mana satu nukleus yang tidak stabil menjadi stabil dengan mengeluarkan sinaran radioaktif.</i>   | 1                |
| 10(b)    | M1 : Initial activity is the same // Aktiviti asal sama<br>M2 : Time interval: $10.2 > 10.1$<br><i>Sela masa aktiviti: <math>10.2 &gt; 10.1</math></i><br>M3 : Rate of decay: $10.2 < 10.1$<br><i>Kadar penyusutan radioaktif: <math>10.2 &lt; 10.1</math></i><br>M4 : The higher the rate of decay, the shorter time interval // Semakin tinggi kadar penyusutan, semakin pendek sela masa | 1<br>1<br>1<br>1 |

|       |  |   |
|-------|--|---|
|       | M5 : The shorter the half life, the higher the rate of decay // Semakin pendek separuh hayat, semakin tinggi kadar penyusutan.   | 1 |
| 10(c) | <p>M1 : Alpha particles have the weakest penetration power<br/> <i>Zarah-zarah alfa mempunyai kuasa penembusan yang paling lemah</i></p> <p>M2 : Alpha particles have a range of a few cm in air.<br/> <i>Zarah-zarah alfa mempunyai julat beberapa cm dalam udara.</i></p> <p>M3 : They cannot pass through the body tissues of the patient, therefore cannot be detected outside the body.<br/> <i>Zarah-zarah alfa tidak boleh melalui tisu badan pesakit, maka tidak boleh dikesan di luar badan.</i></p> <p>M4 : The power of ionisation of alpha particles is very high and may destroy human cells.<br/> <i>Zarah-zarah alfa mempunyai kuasa pengionan yang lebih tinggi dan akan memusnahkan sel manusia.</i></p>  | 1 |
| 10(d) | <p>M1 : Gamma rays are used as they have the highest penetration power but lowest ionisation power.<br/> <i>Sinaran gama digunakan kerana mempunyai kuasa penembusan yang paling tinggi tetapi kuasa pengionan yang paling rendah.</i></p> <p>M2 : They have high energy and can kill cancer cells.<br/> <i>Mempunyai tenaga tinggi dan boleh membunuh sel-sel kanser.</i></p> <p>M3 : Use MRI, X-ray or CT scans to locate the exact positions of cancer cells<br/> <i>Menggunakan MRI, sinar-X atau CT scans untuk menentukan kedudukan tepat sel kanser</i></p> <p>M4 : Identify the positions of cancer cells correctly<br/> <i>Mengenal pasti kedudukan sel kanser dengan betul</i></p> <p>M5 : To target gamma radiation accurately on the cancer cells<br/> <i>Menujukan sinaran gama dengan tepat ke atas sel kanser</i></p> <p>M6 : To avoid destroying other living cells<br/> <i>Untuk mengelakkan pemusnahan sel-sel hidup yang lain</i></p> <p>M7 : The dosage of the ray required is moderate and sufficient.<br/> <i>Dos sinaran yang diperlukan adalah sederhana dan mencukupi</i></p> <p>M8 : If the dosage is low, not all the cancer cells will be destroyed<br/> <i>Jika dos adalah rendah, bukan semua sel kanser akan dimusnahkan</i></p> <p>M9 : If the dosage is high, other cells will be destroyed.<br/> <i>Jika dos adalah tinggi, sel-sel yang lain akan dimusnahkan.</i></p> <p>M10 : The time of exposure to the rays is not too long.<br/> <i>Masa pendedahan kepada sinar tidak boleh terlalu lama.</i></p> <p>M11 : To prevent other healthy cells from being destroyed.<br/> <i>Untuk mengelakkan sel-sel sihat yang lain daripada dimusnahkan</i></p> | 1 |

Bahagian C

| Question   | Answer  | Mark   |
|------------|---|--|
| 11(a)      | Rate of change of momentum // kadar perubahan momentum<br>Force act in a short time interval during collision or explosion // daya yang bertindak dalam masa yang singkat ketika perlanggaran atau letupan  | 1  |
| 11(b)      | M1 Impulsive force $\propto$ 1/time // Impulsive force inversely proportional to time of impact<br>M2 To increase the time of impact // tambah masa tindak balas<br>M3 To reduce impulsive force<br>M4 Helmet – to protect the head / melindungi kepala<br>M5 Jacket – to protect the body / melindungi badan | 1<br>1<br>1<br>1<br>1<br>Max 4   |
| 11(c)(i)   | M1 : $\frac{160 \times 1000}{3600} = 44.44 \text{ m/s}$   | 1  |
| 11(c)(ii)  | M1 $a = v - u = 44.44 - 0$<br>$t \quad \quad \quad 10$<br>M2 $a = 4.44 \text{ m s}^{-2}$  | 1<br>1   |
| 11(c)(iii) | M1 $F = ma = 202 \times 4.44$<br>M2 $F = 896.88 \text{ N}$  | 1<br>1   |
| 11(d)      | CHARACTERISTICS   | REASON   |
|            | With ABS<br>Dengan ABS  | Motorcycle does not stop immediately/<br>can be controlled if direction changes/<br>does not move sideways / more friction<br>with ABS.<br>// motorsikal tidak berhenti secara tiba-tiba / boleh mengawal perubahan arah / lebih geseran / cengkaman |
|            | Bigger with of tyre<br>Tayar besar  | Bigger surface area, better support /<br>low pressure acts on the tyres/ more<br>friction when breaks. // luas permukaan<br>lebih besar / sokongan lebih baik //<br>tekanan rendah ke atas tayar // lebih<br>geseran bila membrek                    |
|            | Smaller mass<br>Jisim kecil   | Lighter, can move faster / low inertia. //<br>ringan / boleh bergerak laju // inersia  |

|       |  |   |        |
|-------|--|---|--------|
|       | rendah   |   |        |
|       | Lower seat height<br>Tinggi tempat duduk rendah  | Lower centre of gravity/ more stable/<br>safer when turn // pusat graviti rendah<br>// lebih stabil // selamat bila membelok. | 1<br>1 |
|       | R : Brake with ABS, bigger tyre, smaller mass, lower seat height<br>Brek dengan ABS, tayar besar, jisim kecil, tempat duduk rendah |   |        |
| Total |  |   | 20     |

| Question  | Answer   |                                     | Mark            |        |                                  |   |                             |  |   |  |
|---|--|-------------------------------------|-----------------|--------|----------------------------------|---|-----------------------------|--|---|--|
| 12(a)   | Number of complete oscillation in one second<br>Bilangan ayunan lengkap dalam masa satu saat   |                                     | 1               |        |                                  |   |                             |  |   |  |
| 12(b)   | M1 Pendulum B and X has the same length // bandul B dan X sama Panjang<br>M2 So both have same frequencies / kedua-duanya mempunyai frekuensi sama<br>M3 When X is displaced, all pendulums start to oscillate<br>Bila X disesarkan, bandul-bandul lain turut berayun<br>M4 energy is transferred // tenaga dipindahkan<br>M5 Pendulum X and B are in resonance // Bandul X dan B berada dalam keadaan resonans<br>M6 Pendulum B oscillates with the maximum amplitude // Bandul B berayun dengan amplitud maksimum    | 1<br>1<br>1<br>1<br>1<br>1<br>Max 4 |                 |        |                                  |   |                             |  |   |  |
