MARKING SCHEMES PAPER 2 (STRUCTURE) TRIAL SPM 2014 BIOLOGY

QUESTION 1			
ITEMS	MARKING CRITERIA	MARKS	
(a)	<p><i>Able to name the structure correctly</i></p> <p>Answer: Q : Chloroplast R : Mitochondrion</p>	1 1	2
(b)	<p><i>Able to explain the adaptation of organelle R to perform its function more efficiently correctly</i></p> <p>Answers: F1 : (Inner) membrane folded E1 : (Total) surface area increase E2 : To generate more energy // increase oxidation of glucose OR F2 : Contain (a lot of) respiratory enzyme E3 : Rate of cellular respiration increase // increase oxidation of glucose E4 : To generate more energy</p>	1 1 1 1 1 1 1	3
(c)(i)	<p><i>Able to name point U correctly</i></p> <p>Answer: U : Compensation point</p>	1	
(ii)	<p><i>Able to explain the process that occur at point U</i></p> <p>Answers: F1 : The absorption of CO₂ in organelle Q and releasing of CO₂ in organelle R is equal E1 : Because rate of photosynthesis (in Q) is equal to rate of respiration (in R) .</p>	1 1	3
(d)(i).	<p><i>Able to name the molecule</i></p> <p>Sample answers: Sucrose</p>	1	1
(ii).	<p><i>Able to explain how the molecule filled up region S</i></p> <p>Sample answer F1 : Cell wall is fully permeable. E1 : Concentration of sucrose outside is higher than inside the cell E2 : Sucrose diffuse into region S by simple diffusion.</p>	1 1 1	3

	<p>Alternative using science text</p> <div style="border: 1px solid black; padding: 5px; margin: 10px auto; width: fit-content;"> <p>O = Object C = Condition P = Process / Phenomenon R = Result</p> </div> <p>OC : Cell wall is fully permeable.</p> <p>P1 : Concentration of sucrose outside is higher than inside the cell</p> <p>P2 : Sucrose diffuse into region S by simple diffusion.</p>	<p>1</p> <p>1</p> <p>1</p>	<p></p> <p></p> <p>3</p>
		TOTAL	12

QUESTION 2			
ITEM	MARKING CRITERIA	MARKS	
(a)(i)	<p><i>Able to name the pioneer species and second successor correctly</i></p> <p>Answer: Pioneer : White mould Second successor : Black mould</p>	1 1	2
(ii)	<p><i>Able to give the correct explanation :</i></p> <p>Answers: Pioneer species : White mould is the first species that colonised (on day 2) Second successor : Black mould replaced Yellow mould (on day 10,12 and 14)</p>	1 1	2
(b)	<p><i>Able to explain why the bread mould can grow on the bread even though it is kept in a dark room</i></p> <p>Answer: F1 : Bread mould is a saprophyte E1 : Does not undergo photosynthesis // does not require light to obtain food E2 : Get nutrient from the bread / dead and decayed substances</p>	1 1 1	2
(c)	<p><i>Able to give the definition of competition (operationally)</i></p> <p>Answer: E1 : Interspecific competition // competition between different species E2 : Which are among white, yellow and black mould species E3 : For the bread / same resources / habitat / space</p>	1 1 1 Max 2	2
	<p>Alternative using science text</p> <div style="border: 1px solid black; padding: 5px; width: fit-content; margin: 10px auto;"> <p>Cl = Classification Ch = Characteristic/s</p> </div> <p>Cl : Interspecific competition // competition between different species Ch1 : Which are among white, yellow and black mould species Ch2 : For the bread / same resources / habitat / space</p>	1 1 1 Max 2	2
(d)	<p><i>Able to explain why percentage coverage of yellow mould decreased on the 14th day</i></p> <p>Answer : F1 : The Yellow mould has change the environment E1 : To become less moist / drier. E2 : (On day 14), the environment / bread is not suitable for Yellow / favourable for Black mould to grow.</p> <p style="text-align: right;">(Any two)</p>	1 1 1	2

	<p>Alternative using science text</p> <div style="border: 1px solid black; padding: 5px; width: fit-content; margin: 10px auto;"> <p>O = Object C = Condition P = Process / Phenomenon R = Result</p> </div> <p>OC : The Yellow mould has change the environment P1 : To become less moist / drier. R : (On day 14), the environment / bread is not suitable for Yellow / favourable for Black mould to grow. <p style="text-align: right;">(Any two)</p> </p>	<p style="text-align: center;">1 1 1 Max 2</p>	<p style="text-align: center;">2</p>
(e)	<p><i>Able to explain why there was no growth of mould on the bread</i></p> <p>Answer : F1 : Low temperature E1 : Enzyme inactive / low rate of enzyme reaction. E2 : Less energy for reproduction / cell division. <p style="text-align: center;">OR</p> F2 : Less oxygen in the refrigerator. E2 : Less respiration of the mould. <p style="text-align: center;">OR</p> F3 : Dry condition in the refrigerator. E3 : Less water for metabolism/ activities of the mould. <p style="text-align: right;">(Any F+respective E)</p> </p>	<p style="text-align: center;">1 1 1 1 1 1</p>	<p style="text-align: center;">2</p>
TOTAL			12

QUESTIONS 3													
ITEM	MARKING CRITERIA	MARKS											
(a)(i).	<p><i>Able to state the name of the neurone correctly</i></p> <p>Answer: X : Afferent / sensory neurone Z : Efferent / motor neurone</p>	1 1	2										
(ii).	<p><i>Able to give 2 differences between neurone X and Z correctly</i></p> <p>Answer:</p> <table border="1"> <thead> <tr> <th>Neuron X</th> <th>Neuron Z</th> </tr> </thead> <tbody> <tr> <td>F1: The cell body of neurone X is located in between the axon and the dendron / middle</td> <td>The cell body of neurone Z is at one end of the neurone</td> </tr> <tr> <td>F2: There are dendrites at the cell body of neurone X</td> <td>There are no dendrites at the cell body of neurone Z</td> </tr> <tr> <td>F3: Neurone X has long dendrites</td> <td>Neurone Z has short dendrites</td> </tr> <tr> <td>F4: Neurone X has short axon</td> <td>Neurone Z has long axon</td> </tr> </tbody> </table> <p style="text-align: right;">(Any 2 F)</p>	Neuron X	Neuron Z	F1: The cell body of neurone X is located in between the axon and the dendron / middle	The cell body of neurone Z is at one end of the neurone	F2: There are dendrites at the cell body of neurone X	There are no dendrites at the cell body of neurone Z	F3: Neurone X has long dendrites	Neurone Z has short dendrites	F4: Neurone X has short axon	Neurone Z has long axon	1 1 1 1 1 Max 2	2
Neuron X	Neuron Z												
F1: The cell body of neurone X is located in between the axon and the dendron / middle	The cell body of neurone Z is at one end of the neurone												
F2: There are dendrites at the cell body of neurone X	There are no dendrites at the cell body of neurone Z												
F3: Neurone X has long dendrites	Neurone Z has short dendrites												
F4: Neurone X has short axon	Neurone Z has long axon												
(b)	<p><i>Able to explain the reflex arc involved.</i></p> <p>Answers: F1 : Thermoreceptor / hot receptor detect the heat from hot object and triggers / generate nerve impulses F2 : Impulses is transmitted from afferent neurone to interneurone (in the spinal cord) F3 : Across a synapse F4 : Impulse is then transmitted from interneuron to efferent neurone F5 : Across a synapse F6 : Efferent neurone transmit impulse to muscle / biceps effector F7 : Biceps / muscle / effector contract to bend the arm / pull away from the flame</p> <p style="text-align: right;">(Any 3F) (F3 and F5 – 1m only)</p>	1 1 1 1 1 1 1 1 Max 3	3										

	<p>Alternative using science text</p> <div style="border: 1px solid black; padding: 5px; margin-bottom: 10px;"> <p>O = Object C = Condition P = Process / Phenomenon R = Result</p> </div> <p>OC :Thermoreceptor / hot receptor detect the heat from hot object and triggers / generate nerve impulses</p> <p>P1 : Impulses is transmitted from afferent neurone to interneurone (in the spinal cord)</p> <p>P2 : Across a synapse</p> <p>P3 : Impulse is then transmitted from interneuron to efferent neurone</p> <p>P4 : Across a synapse</p> <p>P5 : Efferent neurone transmit impulse to muscle / biceps effector</p> <p>R : Biceps / muscle / effector contract to bend the arm / pull away from the flame</p>	<p>1</p> <p>1</p> <p>1</p> <p>1</p> <p>1</p> <p>1</p> <p>1</p> <p>Max 3</p>	<p>3</p>
(c)	<p><i>Able to explain if ventral root is injured during an accident</i></p> <p>Answers:</p> <p>F1 : Ventral root contains efferent neurone</p> <p>E1 :Efferent neurone cannot transmit the nerve impulses (from CNS) to effector / muscle.</p> <p>E2 :Effector / muscle cannot // the arm cannot be bend // cannot produce respond.</p> <p style="text-align: right;">Any two</p>	<p>1</p> <p>1</p> <p>1</p>	<p>2</p>
	<p>Alternative using science text</p> <div style="border: 1px solid black; padding: 5px; margin-bottom: 10px;"> <p>O = Object C = Condition P = Process / Phenomenon R = Result</p> </div> <p>OC : Ventral root contains efferent neurone</p> <p>P1 :Efferent neurone cannot transmit the nerve impulses (from CNS) to effector / muscle.</p> <p>P2 :Effector / muscle cannot // the arm cannot be bend // cannot produce respond.</p> <p style="text-align: right;">Any two</p>	<p>1</p> <p>1</p> <p>1</p> <p>Max 2</p>	<p>2</p>

(d)	<p><i>Able to explain why reflex action of a person suffering from Parkinson disease is less rapid compare to normal person.</i></p> <p><u>Answer:</u></p> <p>E1 : No new neurons are formed. to replace dead / damaged neurons</p> <p>E2 : Less neurotransmitter / dopamine produced.</p> <p>E3 : Synaptic contact decreases</p> <p>E4 : Slow impulse transmission.</p> <p>E5 : Brain capacity / ability to send and receive impulses decreases</p> <p>E6 : The ability of the brain to process / interpret / integrate the information is low / slower.</p> <p style="text-align: right;">(Any 3E)</p>	<p style="text-align: center;">1</p> <p style="text-align: center;">1</p> <p style="text-align: center;">1</p> <p style="text-align: center;">1</p> <p style="text-align: center;">1</p> <p style="text-align: center;">1</p> <p style="text-align: center;">1</p> <p style="text-align: center;">Max 3</p>	<p style="text-align: center;">3</p>
TOTAL			12

QUESTION 4			
ITEM	MARKING CRITERIA	MARKS	
(a)	<p><i>Able to name vessel Q and Vessel R</i></p> <p>Answer: Vessel Q : Blood capillary Vessel R : Lymph capillary</p>	1 1	2
(b)	<p><i>Able to explain how interstitial fluid is formed.</i></p> <p>Answer: F1 : Fluid Z is interstitial fluid E1 : Diameter of arterial end is bigger than the capillaries // heart pump the blood in high pressure into the capillaries. E2 : High hydrostatic pressure occur at the arterial end of the capillaries E3 : Some of the blood plasma / any two examples (glucose, amino acid, water, fatty acid) is filtered out / forced out from the blood capillary to the interstitial spaces / intercellular spaces <i>(Reject: diffuses out)</i></p> <p style="text-align: right;">(F + any E)</p>	1 1 1 1 Max 2	2
	<p>Alternative using science text</p> <div style="border: 1px solid black; padding: 5px; width: fit-content;"> <p>O = Object C = Condition P = Process / Phenomenon R = Result</p> </div> <p>OC1 : Diameter of arterial end is bigger than the capillaries // heart pump the blood in high pressure into the capillaries. P1 : High hydrostatic pressure occur at the arterial end of the capillaries P2 : Some of the blood plasma / any two examples (glucose, amino acid, water, fatty acid) is filtered out / forced out from the blood capillary to the interstitial spaces / intercellular spaces <i>(Reject: diffuses out)</i> R : Fluid Z is interstitial fluid</p>	1 1 1 1 Max 2	2
(c)	<p><i>Able to Explain what happen if the excess interstitial fluid is not returned to the vessel Q</i></p> <p>Answer: F : Oedema (reject : elephantiasis) E1 : Too much fluid is retained / accumulated in the intercellular space / spaces between the cell E2 : Body tissue swollen</p>	1 1 1	3

(d)	<p><i>Able to explain the mechanism of antibody-antigen</i></p> <p>Answer: F : Agglutination E1 : Antibodies clump pathogens / antigen together E2 : Easy for phagocytes to capture and destroy pathogen / antigen</p> <p style="text-align: right;">(F + any E)</p>	<p style="text-align: center;">1 1 1 Max 2</p>	<p style="text-align: center;">2</p>
	<p>Alternative using science text</p> <div style="border: 1px solid black; padding: 5px; width: fit-content; margin: 10px auto;"> <p>O = Object C = Condition P = Process / Phenomenon R = Result</p> </div> <p>OC : Antibodies clump pathogens / antigen together P : Easy for phagocytes to capture and destroy pathogen / antigen R : Agglutination</p>	<p style="text-align: center;">1 1 1 Max 2</p>	<p style="text-align: center;">2</p>
(e)	<p><i>Able to explain why A person that having sore throat will experience fever and swollen lymph nodes at her neck</i></p> <p>Answer: F : lymph node become (more) active E1: To produce more white blood cells / leucocytes / lymphocytes. (reject : phagocytes) E2: To produce more antibodies E3: To destroy antigen / pathogen / bacteria // interaction between antibody and antigen / pathogen / bacteria. (reject : virus)</p> <p style="text-align: right;">(any two)</p> <p><i>Able to state why the doctor suggested an antibiotic to the patient</i></p> <p>Answer: To destroy / kill the pathogen / bacteria / antigen</p>	<p style="text-align: center;">1 1 1 1 Max 2 1</p>	<p style="text-align: center;">3</p>
TOTAL			12

Question 5																												
ITEM	MARKING CRITERIA	MARK																										
(a)	<p><i>Able to state the genotypes of cat Q correctly</i></p> <p>Answer: Genotype N: TtFf</p>	1	1																									
(b)	<p><i>Able to complete the Punnet square and show possible genotypes if cat P and cat S are crossed together :</i></p> <p>Answer:</p> <table border="1" style="margin-left: 20px;"> <tr> <td style="text-align: center; vertical-align: middle;">Gamet M Gamet P</td> <td style="text-align: center;">TF</td> <td style="text-align: center;">Tf</td> <td style="text-align: center;">tF</td> <td style="text-align: center;">tf</td> </tr> <tr> <td style="text-align: center;">TF</td> <td style="text-align: center;">TTFf</td> <td style="text-align: center;">TTFf</td> <td style="text-align: center;">TtFF</td> <td style="text-align: center;">TtFf</td> </tr> <tr> <td style="text-align: center;">Tf</td> <td style="text-align: center;">TTFf</td> <td style="text-align: center;">TTff</td> <td style="text-align: center;">TtFF</td> <td style="text-align: center;">TTff</td> </tr> <tr> <td style="text-align: center;">tF</td> <td style="text-align: center;">TtFF</td> <td style="text-align: center;">TtFf</td> <td style="text-align: center;">ttFF</td> <td style="text-align: center;">ttFf</td> </tr> <tr> <td style="text-align: center;">tf</td> <td style="text-align: center;">Ttff</td> <td style="text-align: center;">Ttff</td> <td style="text-align: center;">ttFf</td> <td style="text-align: center;">tfff</td> </tr> </table> <p>* Correct male gametes (bold) * Correct female gametes (bold) * All correct genotypes (bold)</p>	Gamet M Gamet P	TF	Tf	tF	tf	TF	TTFf	TTFf	TtFF	TtFf	Tf	TTFf	TTff	TtFF	TTff	tF	TtFF	TtFf	ttFF	ttFf	tf	Ttff	Ttff	ttFf	tfff	1 1 1	3

ANSWER SCHEME PAPER 3
TRIAL BIOLOGY 2014

Sample Procedure :		
<ol style="list-style-type: none"> 1. 1 ml of DCPIP solution is placed in the specimen tube using a 1 ml syringe. 2. The 5 ml syringe is filled with 0.1% ascorbic acid solution. 3. The needle of the syringe is placed into the DCPIP solution 4. Ascorbic acid solution is added drop by drop to the DCPIP solution, and gently stirred with the needle of the syringe (do not shake the tube vigorously). 5. The ascorbic acid solution is continuously added until the DCPIP solution is decolourised. 6. The volume of ascorbic acid solution used is measured and recorded using syringe. 7. Steps 1 to 6 are repeated using fresh watermelon, pineapple and lemon juice. 8. Steps 1 – 7 is repeated by using the same volume of DCPIP solution. 9. The volume of fruit juice used to decolorize the DCPIP solution in each fruit juice is measured using syringe. 10. The percentage of vitamin C in each fruit juice are calculated using the formula: Percentage of Vitamin C = $\frac{\text{Volume of ascorbic acid used}}{\text{Volume of fruit juice used}} \times 0.1\%$ 11. All data are recorded in a table. 		
Able to state all 5K		3
Able to state at least 3 - 4K		2
Able to state 1 - 2K		1
No response or incorrect response		0
