

4541/1
Chemistry
Paper 1
September
2012
1 1/4 jam

**MAJLIS PENGETUA SEKOLAH MALAYSIA
CAWANGAN MELAKA**

**PEPERIKSAAN PERCUBAAN TINGKATAN LIMA
TAHUN 2012**

CHEMISTRY
Kertas 1
Satu jam lima belas minit

JANGAN BUKA KERTAS SOALAN INI SEHINGGA DIBERITAHU

1. *Kertas soalan ini mengandungi 50 soalan.*
2. *Jawab semua soalan.*
3. *Jawab dengan menghitamkan ruangan yang betul pada kertas jawapan.*
4. *Hitamkan satu ruangan sahaja bagi setiap soalan.*
5. *Rajah tidak dilukis mengikut skala kecuali dinyatakan*
6. *Anda dibenarkan menggunakan kalkulator saintifik yang tidak boleh diprogramkan*

Kertas soalan ini mengandungi 23 halaman bercetak.

INFORMATION FOR CANDIDATES

1. *This question paper consists of 50 questions.*
2. *Answer all questions.*
3. *Answer each question by blackening the correct space on the answer sheet.*
4. *Blacken only one space for each question.*
5. *If you wish to change your answer, erase the blackened mark that you have made. Then blacken the space for the new answer.*
6. *The diagrams in the questions provided are not drawn to scale unless stated.*
7. *You may use a non-programmable scientific calculator.*

MAKLUMAT UNTUK CALON

1. *Kertas soalan ini mengandungi 50 soalan.*
2. *Jawab semua soalan*
3. *Jawab dengan menghitamkan ruangan yang betul pada kertas jawapan.*
4. *Hitamkan satu ruangan sahaja bagi setiap soalan.*
5. *Sekiranya anda hendak menukar jawapan, padamkan tanda yang telah dibuat. Kemudian hitamkan jawapaan yang baru.*
6. *Rajah yang mengirim soalan tidak dilukis mengikut skala kecuali dinyatakan.*
7. *Anda dibenarkan menggunakan kalkulator saintifik yang tidak boleh diprogramkan*

Question 1 to Question 50 are followed by four options A, B, C or D.

Choose the best option for each question and blackened the corresponding space on the objective answer sheet.

Bagi Soalan 1 hingga Soalan 50, tiap-tiap soalan diikuti oleh empat pilihan jawapan A, B, C dan D. Pilih satu jawapan yang terbaik bagi tiap-tiap soalan dan hitamkan ruangan yang sepadan pada kertas jawapan objektif and

- 1 Diagram 1 shows the symbol of atom X.

Rajah 1 menunjukkan simbol bagi atom X.

24

X

12

Diagram 1

Rajah 1

Which of the following is true based on Diagram 1?

Pernyataan yang mana adalah benar berdasarkan Rajah 1?

	Proton number Nombor proton	Number of neutron Bilangan neutron
A	24	12
B	12	24
C	12	12
D	24	36

- 2 Which substance is an element?

Bahan manakah yang merupakan suatu unsur?

- A Glucose
Glukos
- B Helium
Helium
- C Steam
Stim
- D Air
Udara

- 3 Which of the following statement is true?

Antara berikut, pernyataan yang manakah benar?

- A Condensation is a process whereby liquid turns to gas.
Kondensasi ialah proses di mana cecair menjadi gas.
- B Solid, liquid and gas are three types of particle.
Pepejal, cecair dan gas ialah tiga jenis zarah.
- C Atom, molecule and ion are three state of matter
Atom, molekul dan ion merupakan tiga keadaan jirim
- D Proton, neutron and electron are three subatomic particles.
Proton, neutron dan elektron ialah tiga zarah subatom.

- 4 Which of the following is the usage of carbon-14 isotope ?
Antara berikut yang manakah kegunaan isotop karbon-14 ?

- A Kill cancer cells
Memburuuh sel-sel kanser
- B Generate electrical energy
Menjana tenaga elektrik
- C Determine the age of fossil
Menentukan umur fosil
- D Diagnose thyroid problems
Mengesan penyakit tiroid

- 5 Diagram 2 shows the electron arrangement of an oxygen atom.
Rajah 2 menunjukkan susunan elektron bagi satu atom oksigen.

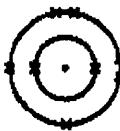

Diagram 2
Rajah 2

Which of the following is true about this atom?
Antara berikut, yang manakah benar tentang atom ini?

- A The number of valence electrons is 6
Bilangan elektron valens ialah 6
 - B The total number of electrons is 6
Jumlah bilangan elektron ialah 6
 - C The proton number is 16
Nombor proton ialah 16
 - D The nucleon number is 8
Nombor nukleon ialah 8
- 6 Which of the following is the correct formula for sodium carbonate ?
Antara berikut, yang manakah formula yang betul bagi natrium karbonat ?

- A NaCO_3
- B Na_2CO_3
- C $\text{Na}(\text{CO}_3)_2$
- D Na_2CO

- 7 One mole of a substance is defined as the quantity of a substance that contains the same number of particles as in n g of element X.

What are n and X?

Satu mol bahan ditakrifkan sebagai kuantiti bahan yang mengandungi bilangan zarah yang sama seperti yang terdapat dalam n g unsur X.

Apakah n dan X?

	n	X
A	2	Hydrogen-1 <i>Hidrogen-1</i>
B	16	Oxygen-16 <i>Oksigen-16</i>
C	35	Chlorine-35 <i>Klorin-35</i>
D	12	Carbon-12 <i>Karbon-12</i>

- 8 The empirical formula of magnesium oxide is determined by heating magnesium ribbon in excess oxygen.

Which of the following can be done to ensure that the reaction have been completed ?

Formula empirik magnesium oksida ditentukan dengan memanaskan pita magnesium dalam oksigen berlebihan.

Antara berikut, yang manakah boleh dilakukan untuk memastikan tindak balas telah lengkap ?

A Wiped the magnesium ribbon with sandpaper.

Gosok pita magnesium dengan kertas pasir.

B Weigh the magnesium oxide while it is still hot.

Timbang magnesium oksida semasa ia masih panas.

C Open the crucible lid once a while.

Penutup mangkuk pijar dibuka sekali-sekala.

D The heating, cooling and weighing steps are repeated until constant mass is obtained.

Langkah pemanasan, penyejukan dan penimbangan diulang sehingga jisim tetap diperolehi.

- 9 Which substance is a covalent compound?

Bahan manakah adalah sebatian kovalen?

A Sodium oxide

Natrium oksida

B Copper(II) nitrate

Kuprum(II) nitrat

C Potassium chloride

Kalium klorida

D Ammonia

Ammonia

- 10 Which statement explains why the reactivity of Group 1 elements increases when going down the group?

Pernyataan manakah yang menerangkan mengapa kereaktifan unsur Kumpulan 1 meningkat apabila menuruni kumpulan itu?

- A The valence electron gets further away from the nucleus
Elektron valens semakin jauh dari nukleus
- B The melting points of the elements decreases
Takat lebur bagi unsur menurun
- C The attraction force between valence electron and the nucleus become stronger
Daya tarikan antara elektron valens dengan nucleus semakin kuat
- D The physical state of the elements changes from gas to liquid then to solid at room temperature
Keadaan fizik bagi unsur berubah daripada gas kepada cecair dan kemudian kepada pepejal pada suhu bilik

- 11 Table 1 shows the properties of elements X, Y and Z. These elements are located in the same period in the Periodic Table.

Jadual 1 menunjukkan sifat oksida bagi unsur-unsur X, Y dan Z. Unsur-unsur ini terletak dalam kala yang sama dalam Jadual Berkala.

Element <i>Unsur</i>	Property of oxide <i>Sifat bagi oksida</i>
X	Acidic <i>Bersifat asid</i>
Y	Basic <i>Bersifat bes</i>
Z	Amphoteric <i>Amfoterik</i>

Table 1
Jadual 1

Arrange the three elements based on the increasing atomic size.
Susun ketiga-tiga unsur itu berdasarkan pertambahan saiz atom.

- A X, Y, Z
- B X, Z, Y
- C Y, Z, X
- D Y, X, Z

- 12 Equation below shows the reaction between iron and chlorine to form iron(III) chloride.
Persamaan di bawah menunjukkan tindakbalas antara ferum dan klorin untuk menghasilkan ferum(III) klorida.

What is the mass of iron(III) chloride formed when 28 g of iron reacts with excess chlorine?

[Relative atomic mass: Fe = 56, Cl = 35.5]

Berapakah jisim ferum(III) klorida yang terhasil apabila 28 g serum bertindak balas dengan klorin berlebihan?

[Jisim atom relatif: Fe = 56, Cl = 35.5]

- A 8.125g
 - B 81.25 g
 - C 156.8 g
 - D 162.5 g

- 13 Diagram 3 shows six elements in Period 4 of the Periodic Table of Elements. Which of the following is not true about the elements?
Rajah 3 menunjukkan enam unsur dalam Kala 4 Jadual Berkala Unsur. Antara berikut, yang manakah tidak benar tentang unsur-unsur itu ?

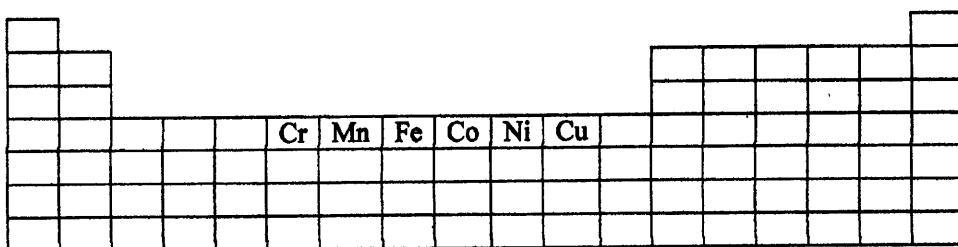

Diagram 3
Rajah 3

- A Able to act as catalyst
Boleh bertindak sebagai mangkin
 - B Able to form coloured compounds
Boleh membentuk sebatian yang berwarna
 - C Do not conduct electricity
Tidak mengkonduksi elektrik
 - D Have a high melting point
Mempunyai takat lebur yang tinggi

14 Which of the following statements are true about the Periodic Table Of Elements?

Pernyataan manakah adalah benar mengenai Jadual Berkala Unsur?

- I The horizontal rows are called groups
Baris mendatar dikenali sebagai kumpulan
 - II The vertical columns are called period
Turus menegak dikenali sebagai kala
 - III The group 17 elements are known as Halogen
Unsur kumpulan 17 dikenali sebagai Halogen
 - IV There are 18 groups in the Periodic Table
Terdapat 18 kumpulan dalam Jadual Berkala
- A I and II only
 - B III and IV only
 - C I, II and IV only
 - D I, II, III and IV

15 Which statement is true about the reaction of a magnesium atom with chlorine to form magnesium chloride?

[Proton number: Cl = 17, Mg = 12]

Pernyataan manakah yang benar tentang tindak balas atom magnesium dengan klorin untuk membentuk magnesium klorida?

[Nombor proton: Cl = 17, Mg = 12]

- A One magnesium atom donates two electrons to two chlorine atoms
Satu atom magnesium menderma dua elektron kepada dua atom klorin
- B One magnesium atom donates one electron to one chlorine atom
Satu atom magnesium menderma satu elektron kepada satu atom klorin
- C One magnesium atom shares two electrons with two chlorine atoms
Satu atom magnesium berkongsi dua elektron dengan dua atom klorin
- D One magnesium atom shares one electron with one chlorine atom
Satu atom magnesium berkongsi satu elektron dengan satu atom klorin

16 What is the meaning of ionic bond?

Apakah maksud ikatan ionik?

- A A bond formed when metal atoms contribute electrons to each other to achieve a stable electron arrangement.
Ikatan yang terbentuk apabila atom-atom logam menyumbangkan elektron kepada satu sama lain untuk mencapai susunan elektron yang stabil.
- B A bond formed by weak Van der Waals forces between the non-metal atoms.
Ikatan yang terbentuk oleh daya Van der Waals yang lemah di antara atom-atom bukan logam.
- C A bond formed when metal atom transfer electron to non-metal atom.
Ikatan yang terbentuk apabila atom logam memindahkan elektron kepada atom bukan logam.
- D A bond formed when non-metal atoms share electrons to achieve a stable electron arrangement.
Ikatan yang terbentuk apabila atom-atom bukan logam berkongsi elektron untuk mencapai susunan elektron yang stabil.

- 17 Diagram 4 shows the electron arrangement of a compound between atom P and atom Q.

Rajah 4 menunjukkan susunan elektron bagi sebatian yang terbentuk antara atom P dan atom Q.

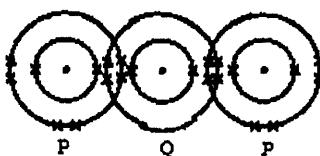

Diagram 4
Rajah 4

The compound formed
Sebatian yang terbentuk

- A can conduct electricity
boleh mengkonduksikan elektrik
- B is soluble in water
larut dalam air
- C has a high melting point
mempunyai takat lebur yang tinggi
- D is a covalent compound
merupakan sebatian kovalen

- 18 Diagram 5 shows an energy level diagram for neutralization process.

Rajah 5 menunjukkan gambarajah aras tenaga bagi tindakbalas peneutralan

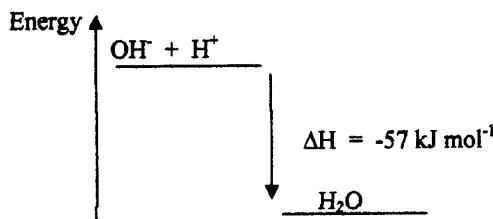

Diagram 5
Rajah 5

Based on the figure above, it can be concluded that

Berdasarkan rajah di atas, dapat disimpulkan bahawa

- A the heat of neutralization is -57 kJ mol^{-1}
haba peneutralan ialah -57 kJ mol^{-1}
- B 57 kJ of energy is needed for the reaction
 57 kJ tenaga diperlukan untuk tindakbalas tersebut
- C The energy content of products is higher than energy content of reactants.
Kandungan tenaga hasil tindakbalas lebih tinggi daripada kandungan tenaga bahan tindakbalas
- D the temperature at the end of the reaction is lower than that at the beginning of the reaction.
Suhu akhir tindak balas adalah lebih rendah daripada suhu awal tindak balas

- 19 The following information shows the result of an experiment to determine the heat change for the combustion of propanol, C_3H_7OH .
Maklumat berikut menunjukkan keputusan eksperimen untuk menentukan perubahan haba bagi pembakaran propanol, C_3H_7OH .

Volume of water in the copper can = 300 cm^3
Isipadu air dalam bekas kuprum

Initial temperature of water = $27.5\text{ }^\circ\text{C}$

Suhu awal air

Highest temperature of water = $68.5\text{ }^\circ\text{C}$

Suhu tertinggi air

Calculate the heat released in above experiment.

[Specific heat capacity of water = $4.2\text{ J g}^{-1}\text{ }^\circ\text{C}^{-1}$, water density = 1 g cm^{-3}]

Hitung haba yang dibebaskan dalam eksperimen di atas.

[Haba spesifik air = $4.2\text{ J g}^{-1}\text{ }^\circ\text{C}^{-1}$, ketumpatan air= 1 g cm^{-3}]

- A 34.65 kJ
- B 51.66 kJ
- C 86.31 kJ
- D 120.96 kJ

- 20 The equation below shows a displacement reaction and its heat of reaction.
Persamaan di bawah menunjukkan tindakbalas penyesaran haba tindakbalasnya.

Which of the following statements are true about the above reaction?

Pernyataan yang mana adalah benar tindakbalas di atas?

- I Magnesium is oxidized
Magnesium dioksidakan
- II The reaction is exothermic
Merupakan tindakbalas eksotermik
- III The temperature decreases during the reaction
Suhu semakin berkurang semasa tindakbalas
- IV The heat released is 37.8 kJ
Haba yang dibebaskan ialah 37.8 kJ

- A I and II only
- B II and IV only
- C III and IV only
- D I, II and IV only

- 21 Table 2 shows the heat of combustion of three alcohols.

Jadual 2 di bawah menunjukkan haba pembakaran bagi tiga jenis alkohol

Alcohol	Heat of combustion / kJ mol ⁻¹ <i>Haba pembakaran/ kJ mol⁻¹</i>
CH ₃ OH	-710
C ₂ H ₅ OH	-1370
C ₄ H ₉ OH	-2670

Table 2

Jadual 2

Which of the following factors increases the heat of combustion of alcohols?

Faktor yang manakah antara berikut, meningkat haba pembakaran alkohol tersebut?

- A Size of molecules decreases
Saiz molekul berkurang
- B Number of carbon atoms per molecule increases
Bilangan atom karbon per molekul bertambah
- C Number of oxygen atoms per molecule increases
Bilangan atom oksigen per molekul bertambah
- D Number of hydrogen atoms per molecule decreases
Bilangan atom hidrogen per molekul berkurang

- 22 The following equation shows the combustion of heptane, C₇H₁₆, in excess oxygen.

Persamaan di bawah menunjukkan pembakaran heptana , C₇H₁₆, di dalam oksigen berlebihan.

Calculate the mass of heptane used to release 1378 kJ of energy.

*Hitung jisim heptana yang digunakan untuk membebaskan haba sebanyak 1387 kJ.
[relative atomic mass of H = 1 and C = 12]*

- A 25.0 g
- B 36.0 g
- C 77.0 g
- D 88.0 g

- 23 Which of the following absorbs heat from the surroundings?

Yang manakah antara berikut menyerap haba dari sekeliling?

- A Adding acid to alkali
Menambah asid kepada alkali
- B Adding concentrated acid to water
Menambah asid pekat kepada air
- C Dissolving solid ammonium chloride in water
Melarutkan pepejal ammonium klorida di dalam air
- D Dissolving anhydrous copper(II) sulphate in water
Melarutkan kuprum(II) sulfat terhidrat di dalam air

- 24 The equation below shows a reaction to produce hydrogen gas.

Persamaan di bawah menunjukkan satu tindak balas untuk menghasilkan gas hidrogen.

Which of the following will increase the rate of production of hydrogen gas?

Pernyataan mana yang akan meningkatkan kadar tindak balas penghasilan gas hidrogen?

- A Increase the time of reaction
Meningkatkan masa tindak balas
- B Increase the volume of acid
Meningkatkan isipadu asid
- C Increase the temperature of the mixture.
Meningkatkan suhu tindak balas
- D Increase the size of granulated zinc
Meningkatkan saiz ketulan zink

- 25 Table 3 shows the result of an experiment .

Jadual 3 menunjukkan keputusan yang diperolehi dari suatu eksperimen

Experiment Eksperimen	Keadaan eksperimen	Initial rate Kadar awal
I	1 g magnesium powder react with 50cm ³ of 0.1 mol dm ⁻³ hydrochloric acid <i>1 g serbuk magnesium bertindakbalas dengan 50 cm³ 0.1 mol dm⁻³ asid hidroklorik</i>	Higher <i>Lebih tinggi</i>
II	1 g magnesium ribbon react with 50cm ³ of 0.1 mol dm ⁻³ hydrochloric acid <i>1 g pita magnesium bertindakbalas dengan 50 cm³ 0.1 mol dm⁻³ asid hidroklorik</i>	Lower <i>Lebih rendah</i>

Table 3
Jadual 3

Which of the following explains the difference in the initial rate of reaction?

Pernyataan yang mana menerangkan tentang perbezaan kadar awal tindak balas?

- A Magnesium powder is purer than magnesium ribbon
Serbuk magnesium lebih tulen daripada pita magnesium
- B Magnesium powder floats on the acid, whereas magnesium ribbon sinks in the acid
Serbuk magnesium terapung di atas permukaan asid, manakala pita magnesium tenggelam di dalam asid
- C Magnesium ribbon is covered by a layer of oxide on its surface, whereas magnesium powder is not
Permukaan pita magnesium diselaputi oleh lapisan magnesium oksida, manakala serbuk magnesium tiada
- D Magnesium powder has a larger total surface area than magnesium ribbon
Serbuk magnesium mempunyai jumlah luas permukaan yang lebih besar berbanding pita magnesium

26

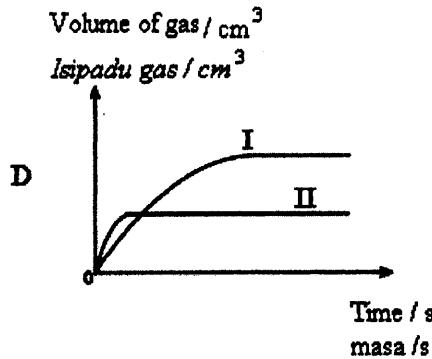

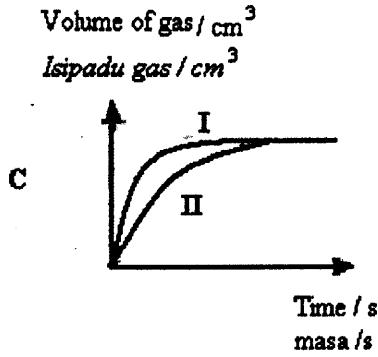

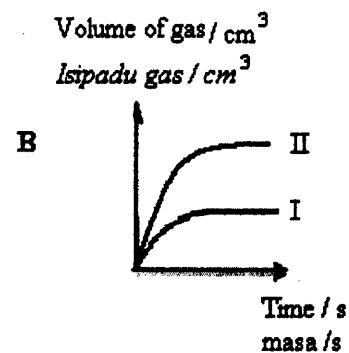

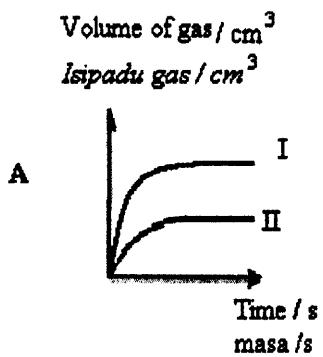

An experiment is carried out to study the rate of reaction between marble chips and hydrochloric acid to produce carbon dioxide gas.

Satu eksperimen telah dijalankan untuk mengkaji kadar tindak balas antara ketulan marmar dengan asid hidroklorik untuk menghasilkan gas karbon dioksida.

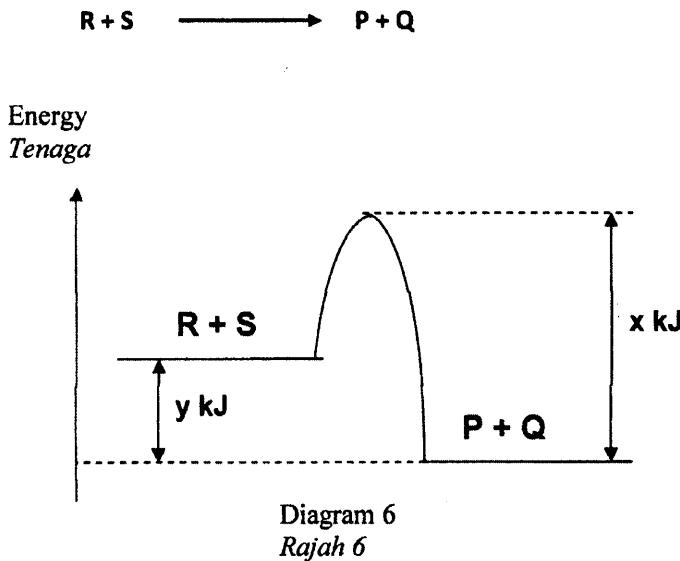

Experiment	Substances
I	Excess marble chips and 50.0 cm^3 of 2 mol dm^{-3} hydrochloric acid <i>Ketulan marmar berlebihan dan 50.0 cm^3 of 2 mol dm^{-3} hydrochloric acid</i>
II	Excess marble chips and 100.0 cm^3 of 1 mol dm^{-3} hydrochloric acid <i>Ketulan marmar berlebihan dan 100.0 cm^3 1 mol dm^{-3} asid hidroklorik</i>

Which of the following graphs represent the two experiments?

Antara graf berikut, yang manakah mewakili graf bagi kedua-dua eksperimen di atas?

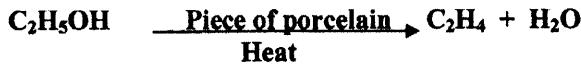

- 27 Diagram 6 shows an energy profile for a reaction which is represented by the following equation:
Rajah 6 menunjukkan profil tenaga bagi tindak balas yang diwakili oleh persamaan berikut:

What is the activation energy for this reaction?
Apakah tenaga pengaktifan bagi tindak balas ini?

- A $y \text{ kJ}$
- B $x \text{ kJ}$
- C $(y - x) \text{ kJ}$
- D $(x - y) \text{ kJ}$

- 28 The following chemical equation shows the conversion of ethanol to ethene.
Persamaan kimia berikut menunjukkan perubahan daripada etanol kepada etena.

What is the name of the process shown by the above equation?
Apakah nama proses yang ditunjukkan dalam persamaan tersebut?

- A Dehydration
Pendehidratan
- B Oxidation
Pengoksidaan
- C Reduction
Penurunan
- D Fermentation
Penapaian

- 29 Which of the following substances can be used to differentiate ethane from ethene?
Antara bahan berikut, yang manakah dapat membezakan etana daripada etena?
- A Sodium hydroxide solution
Larutan natrium hidroksida
- B Dilute sulphuric acid
Asid sulfurik cair
- C Bromine water
Air bromine
- D Lime water
Air kapur

- 30 Diagram 7 shows the structural formula of carbon compound J
Rajah 7 menunjukkan formula struktur sebatian karbon J

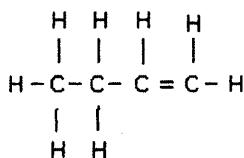

Diagram 7
Rajah 7

Which of the following statements are true?
Antara pernyataan berikut, yang manakah benar?

[Relative atomic mass of H = 1, C = 12]
[Jisim atom relatif H = 1, C = 12]

- I Empirical formula of J is C_4H_8
Formula empirik J ialah C_4H_8
- II Name of the compound J is but-1-ene
Nama sebatian J ialah but-1-ena
- III Hydration of compound J produce butan-1-ol
Penghidratan sebatian J menghasilkan butan-1-ol
- IV Complete combustion of compound J produce carbon dioxide gas and water
Pembakaran lengkap sebatian J menghasilkan gas karbon dioksida dan air
- A I and II only
- B III and IV only
- C I, II and III only
- D II, III and IV only

- 31 Which of the following chemicals is used to keep latex in its liquid state?
Antara bahan kimia berikut, yang manakah digunakan untuk mengekalkan lateks dalam keadaan cecair?

- A Aqueous ammonia
Ammonia akueous
- B Ethanoic acid
Asid ethanoik
- C Methanol
Metanol
- D Water
Air

- 32 What is the homologous series of methyl ethanoate?
Apakah siri homolog bagi metil etanoat?

- A Ester
Ester
- B Alkene
Alkena
- C Alcohol
Alkohol
- D Carboxylic acid
Asid karboksilik

- 33 A student is required to test the presence of nitrate ions in sodium nitrate solution.
Seorang pelajar dikehendaki menguji kehadiran ion nitrat dalam larutan natrium nitrat.

- | |
|-----------------------------------|
| P Add concentrated sulphuric acid |
| Q Add iron (II) sulphate solution |
| R Add dilute sulphuric acid |
| S Shake the solution |
- P Tambah asid sulfurik pekat
Q Tambah larutan ferum (II) sulfat
R Tambah larutan asid sulfurik asid
S Goncangkan larutan itu*

Which of the following steps is the correct sequence to carry out the test?
Yang manakah antara langkah-langkah berikut adalah tertib yang betul bagi menjalankan ujian itu?

- A P, Q, R,S
- B R,Q,S,P
- C Q , R, S, P
- D P, Q, S, R

- 34 Diagram 8 shows the process to produce compound J.
Rajah 8 menunjukkan proses menghasilkan sebatian J.

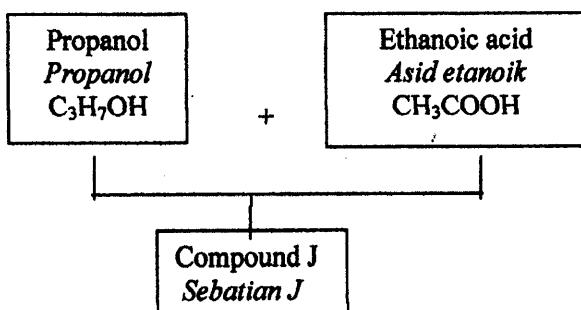

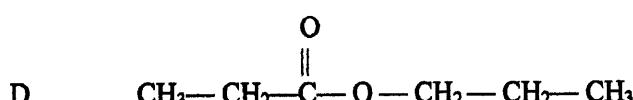

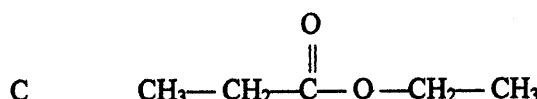

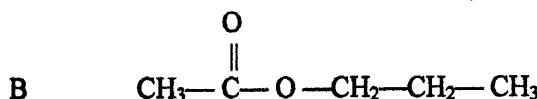

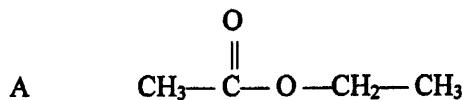

Diagram 8
Rajah 8

Which of the following structural formulas is of compound J?
Formula struktur yang manakah mewakili sebatian J?

- 35 Fibre glass is used to make helmet because it
Gentian kaca digunakan untuk membuat topi keledar kerana ia

- A can withstand heat
boleh tahan haba
- B is hard
adalah keras
- C does not rust easily
tidak mudah berkarat
- D is strong and light
kuat dan ringan

- 36 When ethene gas is passed into an acidified potassium dichromate (VI) solution, the colour of the solution changes from orange to green.
What is the colour change that would be observed if acidified potassium manganate (VII) is used to replace the acidified potassium dichromate (VI)?
Apabila gas etena dialirkan ke dalam larutan kalsium dikromat (VI) berasid, warna larutan bertukar dari jingga ke hijau. Apakah perubahan warna yang diperhatikan jika larutan kalsium manganate (VII) berasid digunakan menggantikan larutan berasid kalsium dikromat (VI)?
- A no colour change
tiada perubahan warna
B colourless to purple
tidak berwarna kepada ungu
C purple to colourless
ungu kepada tidak berwarna
D colourless to pink
tidak berwarna kepada merah jambu
- 37 State the function of sodium perborate which is added to detergent.
Nyatakan fungsi natrium perborat yang ditambah ke dalam detergen.
- A To remove protein stains
Untuk menanggalkan kotoran protein
B To convert stains into colourless substances
Untuk menukar kotoran kepada sebatian tanpa warna
C To enable the detergent to be poured easily
Untuk membolehkan detergen mudah dituangkan
D To control foaming in detergent
Untuk mengawal pembentukan buih
- 38 Sulphuric acid is defined as a strong acid because it
Asid sulfurik ditakrifkan sebagai asid kuat kerana ia
- A changes the colour of blue litmus paper to red
menukar warna biru kertas litmus kepada merah
B produces 2 mol of hydrogen ions when 1 mol of sulphuric acid is used
menghasilkan 2 mol ion hidrogen apabila 1mol asid硫urik digunakan
C can neutralise sodium hydroxide solution to form salt and water
boleh meneutralkan larutan natrium hidroksida untuk menghasilkan garam dan air
D completely ionize in water to form hydrogen ions
mengion sepenuhnya dalam air untuk menghasilkan ion hidrogen
- 39 What is the oxidation number of carbon in carbon dioxide ?
Apakah nombor pengoksidaan karbon dalam karbon dioksida?
- A +4
B +1
C +2
D 0

- 40 Table 3 shows the chemical processes, catalysts used and products formed in the chemical industries. Which of the following is incorrectly matched?

Jadual 3 menunjukkan proses-proses kimia, mangkin yang digunakan dan hasil tindak balas bagi industri kimia.

	Chemical Process Proses kimia	Product Hasil	Catalyst Used Mangkin yang digunakan
A	Haber Process <i>Proses Haber</i>	Ammonia <i>Ammonia</i>	Iron <i>Besi</i>
B	Contact Process <i>Proses Sentuh</i>	Sulphuric acid <i>Asid sulfurik</i>	Vanadium(V) oxide <i>Vanadium (V) oksida</i>
C	Ostwald Process <i>Proses Ostwald</i>	Nitric acid <i>Asid nitrik</i>	Nickel <i>Nikel</i>
D	Hydrogenation of Alkene <i>Penghidrogenan Alkena</i>	Alkane <i>Alkana</i>	Platinum <i>Platinum</i>

Table 3
Jadual 3

- 41 The following equation shows the decomposition of copper(II) carbonate when heated.
Persamaan kimia berikut menunjukkan penguraian kuprum(II) karbonat apabila dipanaskan.

Calculate the mass of copper(II) carbonate left at the end of the reaction when 15g of copper (II) carbonate is heated and 8.0g of copper oxide is produced .

Kirakan jisim kuprum(II) karbonat yang tinggal pada akhir tindak balas apabila 15 g kuprum(II) karbonat dipanaskan dan 8.0g kuprum oksida dihasilkan.

[Relative atomic mass : Cu ; 64 , C; 12 , O; 16]
[Jisim atom relatif : Cu ; 64 , C; 12 , O; 16]

- A 12.4 g
- B 9.6 g
- C 7.0 g
- D 2.6 g

- 42 Which type of food additives does sodium benzoate belong to?

Natrium benzoate tergolong dalam jenis bahan tambah makanan yang mana?

- A Preservative
Pengawet
- B flavouring
perisa
- C antioxidant
Anti oksida
- D stabilizer
penstabil

- 43 Diagram 9 shows the set up of the apparatus of a simple chemical cell. The reading on the voltmeter shows 0.0V.

Rajah 9 menunjukkan susunan radas bagi sebuah sel kimia ringkas. Bacaan pada voltmeter adalah 0.0V

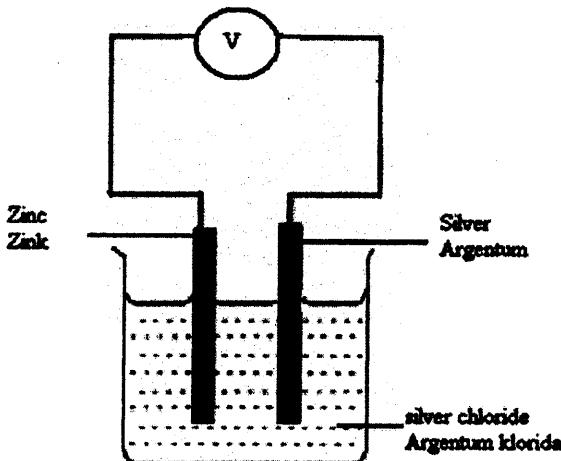

Diagram 9
Rajah 9

Which of the following steps must be taken so that the voltmeter will show a reading?
Yang manakah antara langkah berikut perlu diambil supaya voltmeter menunjukkan bacaan?

- A Use silver nitrate solution to replace silver chloride as electrolyte
Gunakan larutan argentums nitrat untuk mengantikan argentums klorida sebagai elektrolit
- B Insert dry cells in the circuit
Masukkan sel kering dalam litar
- C Change both electrodes to carbon electrodes
Tukar kedua-dua elektrod kepada elektrod karbon
- D Heat the electrolyte while taking the reading of the voltmeter
Panaskan elektrolit semasa mengambil bacaan voltmeter

- 44 A patient complains to his doctor that he is always feeling anxious and depressed without any reason. What is the suitable medicine the doctor should prescribe to treat his symptom?

Seorang pesakit mengadu kepada doktornya yang ianya sentiasa merasa gelisah dan murung tanpa sebarang sebab. Apakah ubat yang sesuai yang boleh dipreskipkan oleh doktor untuk merawat gejala tersebut?

- A clozapine
Klozapin
- B aspirin
aspirin
- C tranquilizer
Trankuiliser
- D streptomycin
streptomisin

- 45 The following methods are the most suitable ways to control rusting of iron except
Kaedah-kaedah berikut adalah cara yang paling sesuai untuk mengawal pengaratan besi kecuali

- A tin-coated steel is used to make tin cans for food
Keluli yang diselaputi stamum digunakan untuk membuat tin makanan
- B using magnesium in underground pipelines
menggunakan magnesium untuk paip-paip bawah tanah
- C painting the hull of ship
Mengecat bahagian luar badan kapal
- D alloying iron with carbon , chromium and nickel to make household cutlery
Mengaloi besi menggunakan karbon, kromium dan nikel untuk membuat kuilieri isi rumah

- 46 The following equation shows the reaction between lead(II) oxide and hydrogen gas.
Persamaan kimia berikut menunjukkan tindak balas plumbum(II) oksida dan gas hidrogen.

Which of the following statements is true about the above equation?

Yang mana antara pernyataan berikut adalah benar tentang persamaan di atas?

- A Hydrogen is reduced to water
Hidrogen diturunkan kepada air
- B The oxidation number of lead changes from +2 to 0
Nombor pengoksidaan plumbum bertukar dari +2 to 0
- C Hydrogen acts as the oxidising agent
Hidrogen bertindak sebagai agen pengoksidaan
- D Hydrogen is less reactive than lead
Hidrogen adalah kurang reaktif daripada plumbum

- 47 Which of the following acids can produce the highest concentration of hydrogen ions when dissolve in water?

Yang manakah antara asid berikut boleh menghasilkan kepekatan ion hidrogen yang paling tinggi apabila larut dalam air?

- A 0.25 moldm^{-3} nitric acid
 0.25 moldm^{-3} asid nitric
- B 0.30 moldm^{-3} hydrochloric acid
 0.30 moldm^{-3} asid hidroklorik
- C 0.30 moldm^{-3} ethanoic acid
 0.30 moldm^{-3} asid etanoik
- D 0.20 moldm^{-3} sulphuric acid
 0.20 moldm^{-3} asid sulfurik

- 48 Diagram 10 shows the properties of a type of chemical cell.
Rajah 10 menunjukkan sifat-sifat sejenis sel kimia

- Rechargeable
- Spilled easily
- Produce high voltage
- Heavy

- *Boleh dicas semula*
- *Mudah tumpah*
- *Menghasilkan voltan tinggi*
- *berat*

Diagram 10
Rajah 10

These descriptions fit an/a

Deskripsi ini menepati

- A alkaline cell
Sel akali
- B nickel-cadmium cell
Sel nikel kadmium
- C lead-acid accumulator
Akumulator asid plumbum
- D mercury cell
Sel merkuri

- 49 Diagram 11 shows the steps involved in the preparation of a standard solution by dilution method.

Rajah 11 menunjukkan langkah-langkah dalam penyediaan larutan piawai menggunakan kaedah pencairan.

1. Calculate the volume of stock solution required.
 2. Pour the stock solution into a container.
 3. Add distilled water to the stock solution until it reaches the required volume.
 4. Shake the solution.
1. *Kirakan isipadu larutan stok yang diperlukan.*
 2. *Tuangkan larutan stok ke dalam bekas.*
 3. *Tambahkan air suling kepada larutan stok sehingga ia mencapai kepada isipadu yang dikehendaki.*
 4. *Goncangkan larutan itu.*

Diagram 11
Rajah 11

Based on the information given , list the apparatus required to prepare the standard solution.

Berdasarkan maklumat di atas, senaraikan radas yang diperlukan untuk menyediakan larutan piawai

- I Beaker
Bikar
 - II Pipette and pipette filler
Pipet dan pam pipet
 - III volumetric flask and stopper
Kelalang volumetrik dan gabus
 - IV dropper
penitis
- A II,III and IV
 - B I , III and IV
 - C II and III
 - D I,II,III and IV

50 Table 4 shows some information of four voltaic cells labelled W,X,Y and Z.

Jadual 4 menunjukkan sebahagian maklumat mengenai sel volta yang berlabel W,X,Y dan Z

Cell <i>Sel</i>	Negative terminal <i>Terminal negatif</i>	Positive terminal <i>Terminal positif</i>	Voltage (V) <i>Voltan (V)</i>
W	Zinc <i>Zink</i>	Copper <i>kuprum</i>	1.1 1.1
X	Zinc <i>Zink</i>	Iron <i>Besi</i>	0.3 0.3
Y	Magnesium <i>Magnesium</i>	Zinc <i>Zink</i>	1.8 1.8
Z	R <i>R</i>	Iron <i>Besi</i>	0.6 0.6

Table 4
Jadual 4

Based on this table, state the position of R in the electrochemical series.

Berdasarkan jadual ini, nyatakan kedudukan R di dalam Siri Elektrokimia.

- A Between zinc and iron
Di antara zink dan ferum
- B Between magnesium and zinc
Di antara magnesium dan zink
- C Between iron and copper
Di antara ferum dan kuprum
- D Above magnesium
Di atas magnesium

**INFORMATION FOR CANDIDATES
MAKLUMAT UNTUK CALON**

1. This question paper consists of three sections: **Section A**, **Section B** and **Section C**.
Kertas soalan ini mengandungi tiga bahagian: Bahagian A, Bahagian B dan Bahagian C.
2. Answer all questions in Section A. Write your answers for **Section A** in the spaces provided in the question paper.
Jawab semua soalan dalam Bahagian A. Tuliskan jawapan bagi Bahagian A dalam ruang yang disediakan dalam kertas soalan.
3. Answer one question from **Section B** and one question from **Section C**.
 Write your answers for **Section B** and **Section C** on the 'writing paper' (examination pad).
 Answer questions in **Section B** and **Section C** in detail.
 You may use equations, diagrams, tables, graphs and other suitable methods to explain your answer.
Jawab satu soalan daripada Bahagian B dan satu soalan daripada Bahagian C. Tuliskan jawapan bagi Bahagian B dan Bahagian C pada kertas tulis (kertas jawapan). Jawab Bahagian B dan Bahagian C dengan terperinci. Anda boleh menggunakan persamaan, gambar rajah, jadual, graf dan cara lain yang sesuai untuk menjelaskan jawapan anda.
4. Show your working. It may help you to get marks.
Tunjukkan kerja mengira. Ini membantu anda mendapatkan markah.
5. If you wish to change your answer, neatly cross out the answer that you have done. Then write down the new answer.
Sekiranya anda hendak membatalkan sesuatu jawapan, buat garisan di atas jawapan itu.
6. The diagrams in the questions are not drawn to scale unless stated.
Rajah yang mengiringi soalan tidak dilukiskan mengikut skala kecuali dinyatakan.
7. Marks allocated for each question or part question are shown in brackets.
Markah yang diperuntukkan bagi setiap soalan atau ceraian soalan ditunjukkan dalam kurungan.
8. The time suggested to answer **Section A** is 90 minutes, **Section B** is 30 minutes and **Section C** is 30 minutes.
Masa yang dicadangkan untuk menjawab Bahagian A ialah 90 minit, Bahagian B ialah 30 minit dan Bahagian C ialah 30 minit.
9. You may use a non-programmable scientific calculator.
Anda dibenarkan menggunakan kalkulator saintifik yang tidak boleh diprogramkan.
10. Hand in your answer sheets at the end of the examination.
Serahkan semua kertas jawapan anda di akhir peperiksaan.

Rajah 2.1 menunjukkan susunan radas untuk menentukan formula empirik magnesium oksida.

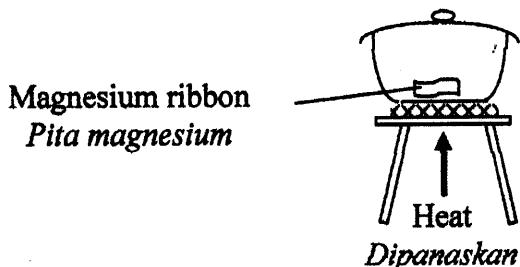

Diagram 2.1
Rajah 2.1

- (a) Why is it necessary to clean the magnesium with sand paper before the weighing process?

Mengapa perlunya magnesium dibersihkan menggunakan kertas pasir sebelum proses menimbang?

.....
[1 mark]

2(a)

1

Table 2.2 shows the results for the experiment to determine the empirical formula of magnesium oxide.

Jadual 2.2 menunjukkan keputusan bagi satu eksperimen untuk menentukan formula empirik bagi magnesium oksida.

Mass of crucible + lid <i>Jisim mangkuk pijar + penutup</i>	28.24 g
Mass of crucible + lid + magnesium ribbon <i>Jisim mangkuk pijar + penutup + pita magnesium</i>	30.64 g
Mass of crucible + lid + magnesium oxide <i>Jisim mangkuk pijar + penutup + magnesium oxide</i>	32.24 g

Table 2.2
Jadual 2.2

- (b) Based on Table 2.2, complete Table 2.3 and determine the empirical formula of magnesium oxide.

Berdasarkan Jadual 2.2, lengkapkan Jadual 2.3 dan seterusnya tentukan formula empirik bagi magnesium oksida:

[Relative atomic mass: O = 16, Mg = 24]

[Jisim atom relatif: O = 16, Mg = 24]

Element <i>Unsur</i>	Mg	O
Mass (g) <i>Jisim</i>		
Number of moles <i>Bilangan mol</i>		
Simplest ratio of moles <i>Nisbah ringkas bilangan mol</i>		
Empirical formula <i>Formula empiric</i>		

Table 2.3
Jadual 2.3

- (c) What must be done to ensure that the reaction has completed?

Apakah yang perlu dilakukan untuk memastikan tindak balas telah lengkap?

.....
[1 mark]

- (d) Write the chemical equation for the reaction in the experiment.

Tuliskan persamaan kimia bagi tindak balas dalam eksperimen itu.

.....
[2marks]

- (e) Can the empirical formula of copper (II) oxide be determined using this same method? Give the reason why.

Bolehkah formula empirik bagi kuprum(II) oksida ditentukan menggunakan cara yang sama? Berikan alasannya .

- 7 Equation below shows the reaction for the industrial production of ammonia.

Persamaan di bawah menunjukkan tindakbalas penghasilan ammonia dalam industri.

- (a) (i) Name the industrial process of producing ammonia.
Namakan proses industri bagi penghasilan ammonia. [1 mark]
- (ii) Write the chemical equation in (a)(i).
Tuliskan persamaan kimia dalam (a)(i). [2 marks]
- (b) State three conditions needed for the reaction to occur.
Nyatakan tiga keadaan yang diperlukan untuk membolehkan tindakbalas itu berlaku. [3 marks]
- (c) Ammonia is used to prepare ammonium nitrate, a chemical fertilizers.
 Describe briefly how you can prepare ammonium nitrate in the laboratory. You are required to write the chemical equation involved.
Ammonia digunakan untuk menghasilkan ammonium nitrat iaitu sejenis baja kimia.
Huraikan dengan ringkas bagaimana anda dapat menyediakan ammonium nitrat di dalam makmal. Dalam jawapan anda sertakan persamaan kimia yang terlibat. [7 marks]
- (d) Diagram shows two type of fertilizers in the market.
Rajah menunjukkan dua jenis baja yang terdapat di pasaran.

BAJA UREA
 $\text{CO}(\text{NH}_2)_2$

BAJA AMMONIUM NITRAT
 NH_4NO_3

State which fertilizer is best used to increase the yield. Give a reason to your answer.

Nyatakan baja yang paling sesuai digunakan bagi meningkatkan hasil tanaman. Beri sebab kepada jawapan anda.

[relative atomic mass: C, 12 ; O, 16 ; N, 14 ; H, 1]

[4 marks]

- (e) Carry out a test to verify the presence of nitrate ions in a solution.
Jalankan satu ujian makmal untuk mengesahkan kehadiran ion nitrat dalam suatu larutan.

- 8 Diagram 8.1 shows part of the Periodic Table of the Elements.

Rajah 8.1 menunjukkan sebahagian Jadual Berkala Unsur

A, B, C, D, E , F, G and H are not the actual symbols of the elements.

A, B, C, D, E , F, G dan H bukan simbol sebenar bagi unsur.

Based on diagram 8.1,

Berdasarkan rajah 8.1,

- (a) (i) Write the electron arrangement for atoms A, D and F.
Tulis susunan elektron bagi atom-atom A, D dan F.

[3 marks]

- (ii) Element F will form two different types of compounds when it reacts with element A and D respectively.

Describe the bond formations in these two compounds.

Unsur F akan membentuk dua jenis sebatian yang berbeza apabila ia bertindak balas secara berasingan dengan unsur A dan unsur D.

Huraikan pembentukan ikatan yang terhasil dalam sebatian-sebatian ini.

[12 marks]

- (b) (i) State a transition element.
Nyatakan satu unsur peralihan.

[1 mark]

- (ii) List two special characteristics of transition elements and give an example for each of this property.

Senaraikan dua ciri istimewa unsur peralihan dan beri satu contoh bagi setiap ciri tersebut.

[4 marks]

Section C
[20 marks]

Answer any one question.

The time suggested to answer this section is 30 minutes

Jawab salah satu soalan

Masa 30 minit dicadangkan untuk menjawab bahagian ini

9

The information below is about organic compound Q.

Maklumat berikut adalah berkaitan dengan sebatian organik Q.

Composition by mass:
Komposisi mengikut jisim:

Carbon : 60 %

Karbon

Hydrogen : 13.33 %

hidrogen

Oxygen : 26.67 %

Oksigen

[Relative molecular mass ,60]

[jisim molekul Relatif, 60]

- (a) Based on information given,

Berdasarkan maklumat yang diberi,

- Determine the molecular formula for compound Q
Tentukan formula molekul sebatian Q
- name the compound Q
namakan sebatian Q
- draw the structural formula for compound Q.
Lukiskan formula struktur sebatian Q

[relative atomis mass: C, 12 ; H, 1 ; O,16]

[Jisim atom relatif: C, 12 ; H, 1 ; O, 16]

[6 marks]

- (b) Hexane and hexene burnt completely in excess oxygen to produce carbon dioxide and water. Compare the sootiness of the flame produced during the reaction.

Explain your answer.

Heksana dan heksena terbakar lengkap dalam oksigen untuk menghasilkan karbon dioksida dan air. Bandingkan kejelagaan nyalaan yang terhasil semasa tindak balas ini.

Terangkan jawapan anda.

[4 marks]

Statement below shows the characteristics of vulcanised rubber.

Pernyataan di bawah menunjukkan sifat-sifat getah tervulkan..

The use of natural rubber is further extended by combining natural rubber with sulphur to produce vulcanised rubber which is more elastic and tougher.

Penggunaan getah asli diperluaskan dengan menggabungkan getah asli dengan sulfur untuk menghasilkan getah tervulkan yang lebih elastik dan lebih kuat

- (c) Based on above statement, describe an experiment to compare the elasticity of natural rubber compared to vulcanized rubber. Your answer should include;
Berdasarkan pernyataan di atas,uraikan satu eksperimen untuk membandingkan kekenyalan getah asli berbanding getah tervulkan. Jawapan anda mestilah mengandungi:
- (i) Labeled diagram
Gambarajah berlabel
 - (ii) Procedure of the experiment
Prosedur eksperimen
 - (iii) Result of the experiment
Keputusan eksperimen

[10 marks]

- 10 Diagram 10.1 shows three test tubes , each containing a mixture of a certain halogen and halide solutions in 1,1,1- trichloroethane in an experiment to investigate the displacement of halogen from its halide solution.

Rajah 10.1 menunjukkan tiga tabung uji, masing-masing mengandungi campuran sesuatu halogen dan larutan halida dalam 1,1,1-trikloroetana untuk menjalankan eksperimen mengkaji penyesaran halogen daripada larutan halidanya.

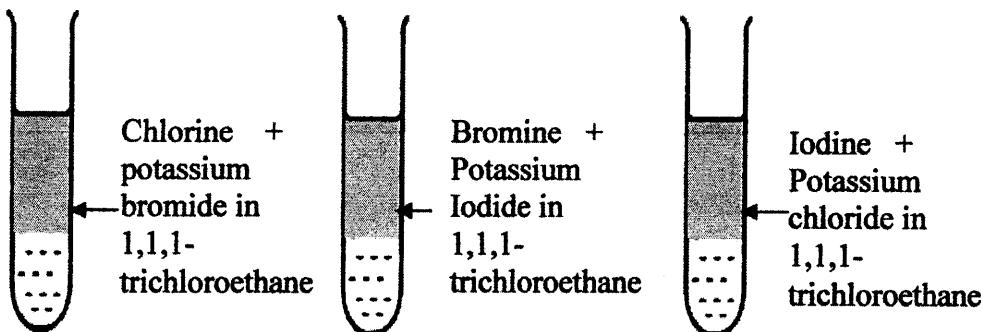

Diagram 10.1
Rajah 10.1

- (a) The observations for the experiments are recorded in table 10.2.
Pemerhatian bagi eksperimen-eksperimen itu dicatatkan dalam jadual 10.2

Experiment <i>Experimen</i>	Mixture <i>Campuran</i>	Observation in the 1,1,1-trichloroethane layer <i>Pemerhatian dalam lapisan 1,1,1-trikloroetana</i>
I	Chlorine and potassium bromide <i>Klorin dan larutan kalium bromida</i>	Brown colour <i>Warna perang</i>
II	Bromine and potassium iodide <i>Bromin dan larutan kalium iodida</i>	Purple colour <i>Warna ungu</i>
III	Iodine and potassium chloride <i>Iodine dan kalium klorida</i>	Purple colour <i>Warna ungu</i>

Table 10.2
Jadual 10.2

- (i) Based on table 10.2 , explain the observation obtained for each of the experiment. Write the chemical equations for the reactions that take place.
Berdasarkan jadual 10.2, terangkan pemerhatian yang didapati bagi setiap eksperimen tersebut.
Tuliskan persamaan kimia bagi tindak balas yang berlaku.

[6 marks]

- (ii) Arrange the halogen in the descending order of strength as the oxidising agent and the halide ions in the descending order of strength as the reducing agent.
Susunkan halogen mengikut tertib menurun kekuatannya sebagai agen pengoksidaan manakala ion halida disusun mengikut tertib berkurang kekuatannya sebagai agen penurunan.

[2 marks]

- (b) Diagram 10.3 shows the apparatus set-up of an experiment to investigate the transfer of electrons at a distance.

Rajah 10.3 menunjukkan susunan radas eksperimen untuk mengkaji pemindahan elektron pada suatu jarak

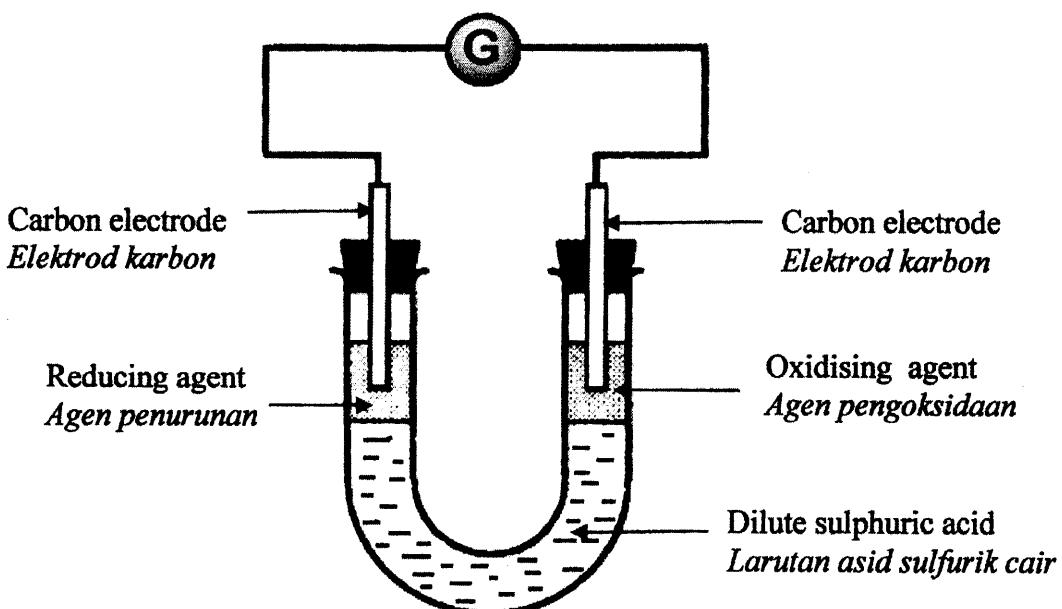

Diagram 10.3

Rajah 10.3

By referring to the set up of the apparatus , describe the method to carry out the experiment. Include in your descriptions , the names of the suitable substances to be used as the oxidising agent and reducing agent, the procedures, the observation, and the oxidation and reduction half – equations.

Dengan merujuk kepada susunan radas di atas,uraikan kaedah untuk menjalankan eksperimen ini. Masukkan dalam huraian anda , nama bahan yang sesuai untuk digunakan sebagai agen pengoksidaan dan agen penurunan, langkah-langkah dan pemerhatian eksperimen serta setengah persamaan pengoksidaan dan setengah persamaan penurunan.

Kertas 3

Satu jam tiga puluh minit

JANGAN BUKA KERTAS SOALAN INI SEHINGGA DIBERITAHU

1. Tuliskan nama dan tingkatan pada ruang yang disediakan.
2. Kertas soalan ini adalah dalam dwi bahasa.
3. Calon hendaklah membaca arahan pada halaman 2.

Untuk kegunaan pemeriksa sahaja		
Soalan	Markah Penuh	Markah diperolehi
1	21	
2	12	
3	17	
Jumlah	50	

Kertas soalan ini mengandungi 10 halaman bercetak

INFORMATION FOR CANDIDATES

1. This question paper consists of three questions. Answer all questions.
Kertas soalan ini mengandungi tiga soalan. Jawab semua soalan.
2. Write your answer for Question 1 and 2 in the spaces provided in the question paper.
Tulis jawapan anda bagi Soalan 1 dan 2 pada ruang yang disediakan dalam kertas soalan ini.
3. Write your answers for Question 3 on the writing paper provided by the invigilators.
Tulis jawapan anda bagi Soalan 3 pada kertas tulis yang disediakan.
4. You may use equations, diagrams, tables, graph and other suitable methods to explain your answer.
Anda boleh menggunakan persamaan, rajah, jadual, graf dan cara lain yang sesuai untuk menjelaskan jawapan anda.
5. Show your working, it may help you to get marks.
Tunjukkan kerja mengira, ini membantu anda mendapatkan markah.
6. If you wish to change your answer, cross out the answer that you have done. Then write down the new answer.
Jika anda hendak menukar jawapan, batalkan jawapan yang telah dibuat. Kemudian tulis jawapan yang baru.
7. Marks allocated for each question or part question are shown in brackets.
Markah yang diperuntukkan bagi setiap soalan atau ceraian soalan ditunjukkan dalam kurungan.
8. The time suggested to answer each of the questions is 30 minutes.
Masa yang dicadangkan untuk menjawab setiap soalan ialah 30 minit.
9. You may use a non-programmable scientific calculator.
Anda dibenarkan menggunakan kalkulator saintifik yang tidak boleh diprogram.
10. Hand in your answer sheets at the end of the examination.
Serahkan kertas jawapan anda di akhir peperiksaan

- 1 Diagram 1.1 shows the apparatus set-up used to investigate the electrical conductivity of four compounds Q, R, S and T in their molten state.

Rajah 1.1 menunjukkan susunan radas yang digunakan untuk mengkaji kekonduksian elektrik empat sebatian, Q, R, S dan T dalam keadaan leburan.

S	
T	

Diagram 1.3

Rajah 1.3

- (a) Construct a table to record the ammeter readings for all the compounds used in this experiment.

Bina satu jadual untuk merekodkan bacaan ammeter bagi semua sebatian yang digunakan dalam eksperimen ini.

1(a)

[3 marks]

--	--

- (b) Based on observation from Diagram 1.2 and 1.3, state the inference.

Berdasarkan pemerhatian daripada Rajah 1.2 dan 1.3, nyatakan inferensi.

1(b)

[3 marks]

--	--

- (c) Classify compound Q, R, S and T into ionic compound and covalent compound.

Kelaskan sebatian Q, R, S and T kepada sebatian ion dan sebatian kovalen.

Ionic compound <i>Sebatian ion</i>	Covalent compound <i>Sebatian kovalen</i>

1(c)

[3 marks]

--	--

- (d) In this experiment, predict which compounds have high melting and boiling points.

Dalam eksperimen ini, ramalkan sebatian manakah yang mempunyai takat lebur dan takat didih yang tinggi.

1(d)

.....
[3 marks]

3

- (e) For this experiment, state the:

Bagi eksperimen ini, nyatakan:

- (i) Manipulated variable:

Pembolehubah dimanipulasikan:

.....

- (ii) Responding variable:

Pembolehubah bergerak balas:

.....

- (iii) Constant variable:

Pembolehubah dimalarkan:

.....

[3 marks]

1(e)

3

- (f) State one hypothesis for this experiment.

Nyatakan satu hipotesis bagi eksperimen ini.

.....

.....

[3 marks]

1(f)

3

- (g) State the operational definition for ionic compound in this experiment.

Nyatakan definisi secara operasi bagi sebatian ionik dalam eksperimen ini.

.....

.....

[3 marks]

1(g)

2 An experiment was carried out to construct an electrochemical series of metals. Diagram 2.1 shows the apparatus set-up to measure the potential difference between copper and metal M. The experiment was repeated by replacing metal M with metal K and L.

Satu eksperimen telah dijalankan untuk membina siri elektrokimia bagi logam. Rajah 2.1 menunjukkan susunan radas untuk mengukur beza keupayaan antara kuprum dan logam M. Eksperimen ini diulang menggunakan logam K dan L untuk menggantikan logam M.

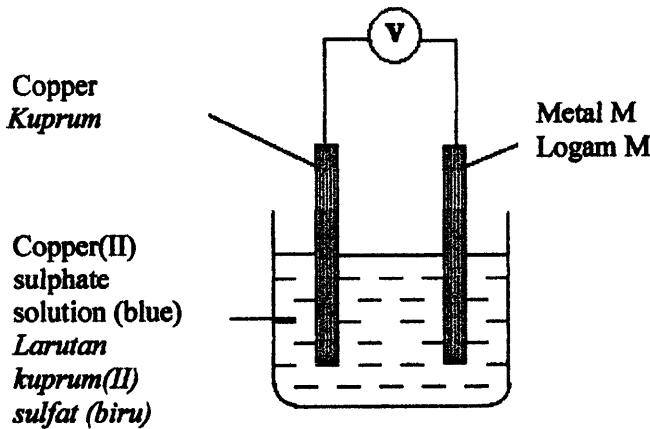

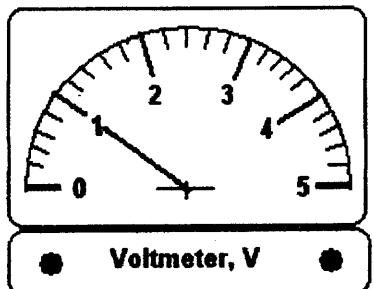

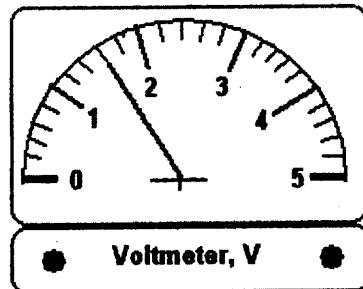

Diagram 2.1

Rajah 2.1

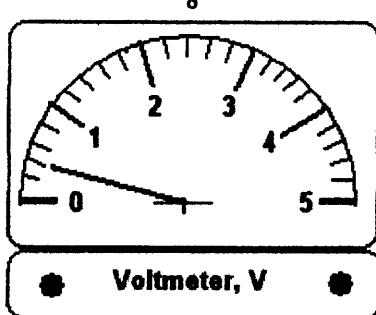

Diagram 2.2 shows the potential difference of three voltmeters A, B and C for the chemical cells with pairs of metal copper / M, copper / K, and copper / L respectively. Rajah 2.2 menunjukkan beza keupayaan bagi tiga voltmeter A, B dan C untuk sel kimia dengan pasangan logam kuprum / M, kuprum / K dan kuprum / L masing-masing.

A

B

C

Diagram 2.2

Rajah 2.2

(a)

Pairs of Metal <i>Pasangan logam</i>	Voltmeter <i>Voltmeter</i>	Potential difference (V) <i>Beza keupayaan (V)</i>	Positive terminal <i>Terminal positif</i>
Copper / M <i>Kuprum / M</i>	A		Copper <i>Kuprum</i>
Copper / K <i>Kuprum / K</i>	B		Copper <i>Kuprum</i>
Copper / L <i>Kuprum / L</i>	C		L

Table 1

Jadual 1

2(a)

3

Record the voltmeter readings for the pairs of metal in Table 1.

Rekod bacaan voltmeter bagi pasangan logam dalam Jadual 1.

[3 marks]

- (b) Arrange copper, M, K and L metals in ascending order in the electrochemical series.

Susun kuprum, logam M, K dan L mengikut tertib menaik dalam siri elektrokimia.

.....

[3 marks]

- (c) State the relationship between the distance between two metals in electrochemical series and potential difference.

Nyatakan hubungan bagi jarak antara dua logam dalam siri elektrokimia dengan beza keupayaan.

.....

.....

[3 marks]

2(b)

- (d) Diagram 2.3 shows the observation for the chemical cell of copper and metal M after 30 minutes.

Rajah 2.3 menunjukkan pemerhatian bagi sel kimia untuk pasangan kuprum dan logam M selepas 30 minit.

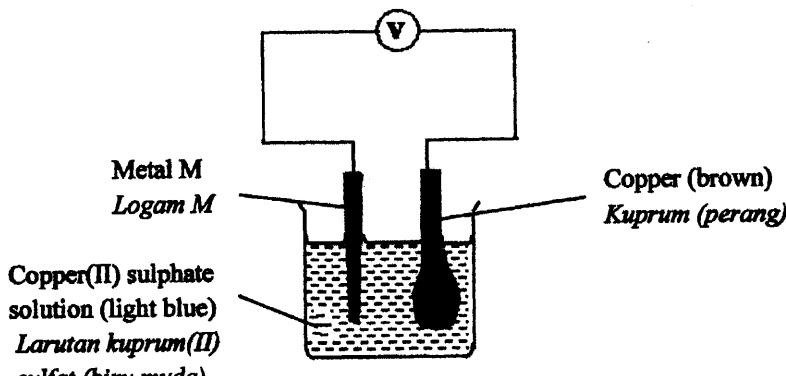

Diagram 2.3

Rajah 2.3

Based on Diagram 2.1 and 2.3, state three observations.

Berdasarkan Rajah 2.1 dan 2.3, nyatakan tiga pemerhatian.

1.
2.
3.

[3 marks]

2(d)

3

Way to store metals in the laboratory partly depends on their reactivity with oxygen. The reactivity of the metals is compared by observing how fast or how vigorous they react. Generally, the more vigorous a metal burns in oxygen, the more reactive the metal is.

Cara untuk menyimpan logam di dalam makmal bergantung kepada kereaktifan sesuatu logam terhadap oksigen. Kereaktifan logam dibandingkan dengan memerhatikan kepantasan atau kecergasan tindak balas sesuatu logam. Umumnya, semakin cergas suatu logam terbakar dalam oksigen, semakin reaktif logam itu.

Based on this idea, plan a laboratory experiment to investigate the reactivity of magnesium, copper, zinc and lead with oxygen. Use solid potassium manganate(VII) as a source of oxygen.

Berdasarkan idea ini, rancang satu eksperimen makmal untuk mengkaji kereaktifan magnesium, kuprum, zink dan plumbum terhadap oksigen. Guna pepejal kaltium manganat(VII) sebagai sumber oksigen.

Your planning should include the following aspects:

Perancangan anda hendaklah mengandungi aspek-aspek berikut:

- (a) Aim of the experiment
Tujuan eksperimen
- (b) All the variables
Semua pembolehubah
- (c) Statement of the hypothesis
Pernyataan hipotesis
- (d) List of substances and apparatus
Senarai bahan dan radas
- (e) Procedure for the experiment
Prosedur eksperimen
- (f) Tabulation of data
Penjadualan data

Paper 2

Skema Pemarkahan ini mengandungi 9 halaman bercetak

	Answer	Marks															
1(a)	Melting	1															
(b)	The particles move faster	1															
(c)	Temperature at which solid turn into liquid	1															
(d)(i)	Functional apparatus Labeled diagram	1 1															
(e)(i)	Correct axis with labels Transfer all the points correctly Correct shape of the graph	1 1 1															
(ii)	At 80°C	1															
(iii)	Heat absorbed is used to overcome the forces between the particles.	110															
2(a)	To remove the oxide layer	1															
(b)	<table border="1"> <thead> <tr> <th>Element <i>Unsur</i></th> <th>Mg</th> <th>O</th> </tr> </thead> <tbody> <tr> <td>Mass (g) <i>Jisim</i></td> <td>2.4</td> <td>1.6</td> </tr> <tr> <td>Number of moles <i>Bilangan mol</i></td> <td>0.1</td> <td>0.1</td> </tr> <tr> <td>Simplest ratio of moles <i>Nisbah ringkas bilangan mol</i></td> <td>1</td> <td>1</td> </tr> <tr> <td>Empirical formula <i>Formula empiric</i></td> <td colspan="2">MgO</td> </tr> </tbody> </table>	Element <i>Unsur</i>	Mg	O	Mass (g) <i>Jisim</i>	2.4	1.6	Number of moles <i>Bilangan mol</i>	0.1	0.1	Simplest ratio of moles <i>Nisbah ringkas bilangan mol</i>	1	1	Empirical formula <i>Formula empiric</i>	MgO		1 1 1 1 1
Element <i>Unsur</i>	Mg	O															
Mass (g) <i>Jisim</i>	2.4	1.6															
Number of moles <i>Bilangan mol</i>	0.1	0.1															
Simplest ratio of moles <i>Nisbah ringkas bilangan mol</i>	1	1															
Empirical formula <i>Formula empiric</i>	MgO																
(c)	Repeat the heating, cooling and weighing process until a constant weight is obtained	1															
(d)	$2\text{Mg} + \text{O}_2 \longrightarrow 2\text{MgO}$ Correct Reactants and products -----1mark Balanced equation -----1mark	2															
(e)	No, because copper is unreactive metal // does not react easily with oxygen	210															
3 (a)	Chloride ion and hydroxide ion	1															
(b)	(i) Anode : Greenish yellow bubbles released Cathode : Colourless gas bubbles released	1 1															
	(ii) Hydrogen ions are selectively discharged at cathode, Chloride ions are selectively discharged at anode	1 1															
(c)	(i) Copper	1															

	(ii) $\text{Cu}^{2+} + 2\text{e} \rightarrow \text{Cu}$	1
(d)	(i) Oxidation	1
	(ii) Decreases. The distance between zinc and magnesium in electrochemical series is nearer than the distance between copper and magnesium.	1 110
4	Neutralisation	1
	$\text{H}_2\text{SO}_4 + 2\text{NaOH} \rightarrow \text{Na}_2\text{SO}_4 + 2\text{H}_2\text{O}$	2
	Pink to colourless	1
	$\text{Ma} (20.0) / (0.5) (25.0) = 1 / 2$ $\text{Ma} = 0.313 \text{ mol dm}^{-3}$	1 1
(b)(i)	P	1
(ii)	R	1
(iii)	Q	1
(c)	P/R	110
5(a)	$\text{Zn} + 2\text{H}^+ \longrightarrow \text{Zn}^{2+} + \text{H}_2$	1
(b)	(i) $50/40 = 1.25 \text{ cm}^3 \text{s}^{-1}$	1+1
(c)	(i) Rate of reaction in Experiment II is higher than in experiment I (ii) The total surface area per unit mass of zinc powder is bigger. The frequency of collision between the zinc atoms and hydrogen ions is higher The frequency of effective collision between the particles also increases	1 1 1

(d)		1
(e)	<p>Reactants & products at correct level—1m Correct position of activation energy—1m</p> 	2
6 (a)	<p>Functional apparatus : flame right under the copper can Tripod stand without wire gauze Termometer in the middle</p> <p>Label diagram: copper can Water [shaded] Ethanol [shaded]</p>	1
(b)(i)	$ \begin{aligned} H &= mc\theta \\ &= 200 \times 4.2 \times 32 \\ &= 26880 \text{ J} \end{aligned} $	1

	(ii)	$0.92/46 = 0.02 \text{ mol}$	1
	(c)	$26880/0.02$ $= 1344000 \text{ J} // 1344 \text{ kJ}$	1+1
	(d)	$\text{C}_2\text{H}_5\text{OH} + 3\text{O}_2 \longrightarrow 2\text{CO}_2 + 3\text{H}_2\text{O}$ Correct formulae of reactants and products Balance chemical reaction	1 1
	(e)		1+110

7	(a)(i)	Haber Process	1
	(ii)	$\text{N}_2 + 3\text{H}_2 \longrightarrow 2\text{NH}_3$ Correct formulae of reactants and products Balance chemical equation	1 1.....2
	(b)	Temperature $450^\circ - 550^\circ\text{C}$ Pressure 60 atm Catalyst iron powder	1 1 1.....3
	(c)	1. Measure [20-100 cm ³] 1 mol dm ⁻³ ammonia solution and pour into a conical flask 2. Add a few drops of phenolphthalein. 3. Add [20-100 cm ³] 1 mol dm ⁻³ nitric acid solution from burette into the conical flask. 4. Until pink colour change to colourless 5. Record the volume of acid. 6. repeat the experiment without using phenolphthalein. 7. the mixture is then heated until saturated 8. and being cooled to obtain crystals	1 1 1 1 1 1 1 1.....8 Max 7

	(d)	Urea Percentage of nitrogen in urea is higher than in ammonium nitrate. % Nitrogen in urea = $28/60 \times 100 = 47\%$ % nitrogen in ammonium nitrate = $28/80 \times 100 = 35\%$	1 1 1.....3
	(e)	Put solution contain nitrate ion into a test tube, Add dilute sulphuric acid and iron(II) sulphate solution Add concentrated sulphuric acid slowly Brown ring is formed	1 1 1 1.....4
		Total	20

8	(a)(i)	1. Electron arrangement of atom A - 2.4 2. Electron arrangement of atom D - 2.8.1 3. Electron arrangement of atom F - 2.8.7	1 1 1.....3
	(a)(ii)	1. Formation of ionic compound when atom F reacts with atom D 2. Atom D donates 1 electron to form D^+ ions // $D \rightarrow D^+ + e^-$ 3. Atom F accepts 1 electron to form F^- ions // $F^- + e^- \rightarrow F^-$ 4. Both ions will achieve stable octet electron arrangements. 5. The ions are attracted toward each other by a strong electrostatic force of attraction 6. The formula of the compound formed is DF 7. [diagram of ions D and F^-] 8. Formation of covalent compound when atom F reacts with atom A 9. 1 atom A shares 4 of its valence electrons with 4 atoms F 10. Each atom F contributes 1 electron for sharing to form 4 single covalent bonds. 11. All the atoms will achieve stable electron arrangements 12. The formula of the compound formed is AF_4 13. 10	(a)(i)	Experiment	Explanation	Equation	
		Chlorine and potassium bromide	Displacement of bromine occurs because chlorine is more reactive than bromine	$KBr + Cl_2 \rightarrow KCl + Br_2$	1+1
		Bromine and potassium iodide	Displacement of iodine occurs because bromine is more reactive than iodine	$KI + Br_2 \rightarrow KBr + I_2$	1+1
		Iodine and potassium chloride	No displacement of Chlorine because Iodine is less reactive than chlorine	(No reaction, hence no equation)	1+16
	(a)(ii)	halogen in the descending order of strength as the oxidising agent : Chlorine, Bromine, Iodine			1
		halide ions in the descending order of strength as the reducing agent : Iodide ions, bromide ions, chloride ions			1
	(b)	the names of the suitable substances to be used as the oxidising agent : eg. acidified potassium manganate (VII) solution // other suitable examples			1+1
		reducing agent : eg. potassium iodide solution // other suitable examples			

	Procedures :	
1.	Clamp a U-tube to a retort stand	1
2.	Pour dilute sulphuric acid into the U-tube until its level are 6cm from the top of the tube.	1
3.	Using a dropper , carefully add potassium iodide solution into one arm of the U-tube.	1
4.	Repeat the same process but now add acidified potassium manganate (VII) solution into the other arm of the tube.	1
5.	Place a graphite electrode into each of the electrolyte in tube and connect using the wires to the galvanometer.	1
6.	Leave the set-up of apparatus for about 30 minutes . Record any changes in both electrolytes and the galvanometer.	1
	Observations	
1.	The acidified potassium manganate (VII) changes colour from purple to colourless // [if other substance used, colour change must be correct according to the substance used].	1
2.	The potassium iodide solution changes colour from colourless to brown//[if other substance used, colour change must be correct according to the substance used].	1
3.	The needle of the galvanometer deflects.	1
	<i>reduction</i> the oxidation half - equations :	1
	$MnO_4^- + 8H^+ + 5e \longrightarrow Mn^{2+} + 4 H_2O$	
	<i>oxidation</i> and reduction half- equation :	1
	$2I^- \longrightarrow I_2 + 2e$	
	[the equations depend on the oxidising and reducing agents used]	1

Question	Details	Score										
1.	<p>(a) Able to construct a table to record the ammeter reading for compounds Q, R, S and T that contain:</p> <ol style="list-style-type: none"> 1. Correct titles 2. Readings and unit <p><u>Sample answer:</u></p> <table border="1"> <thead> <tr> <th>Compound</th><th>Ammeter reading / A</th></tr> </thead> <tbody> <tr> <td>Q</td><td>0.2</td></tr> <tr> <td>R</td><td>0.0</td></tr> <tr> <td>S</td><td>0.0</td></tr> <tr> <td>T</td><td>0.4</td></tr> </tbody> </table>	Compound	Ammeter reading / A	Q	0.2	R	0.0	S	0.0	T	0.4	3
Compound	Ammeter reading / A											
Q	0.2											
R	0.0											
S	0.0											
T	0.4											
	<p>Able to construct a less accurate table that contains the following:</p> <ol style="list-style-type: none"> 1. Titles 2. readings <p><u>Sample answers:</u></p> <table border="1"> <thead> <tr> <th>Compound</th><th>Ammeter reading</th></tr> </thead> <tbody> <tr> <td>Q</td><td>0.2</td></tr> <tr> <td>R</td><td>0.0</td></tr> <tr> <td>S</td><td>0.0</td></tr> <tr> <td>T</td><td>0.4</td></tr> </tbody> </table>	Compound	Ammeter reading	Q	0.2	R	0.0	S	0.0	T	0.4	2
Compound	Ammeter reading											
Q	0.2											
R	0.0											
S	0.0											
T	0.4											
	<p>Or</p> <table border="1"> <thead> <tr> <th>Compound</th><th>Ammeter reading</th></tr> </thead> <tbody> <tr> <td>Q</td><td>0.2</td></tr> <tr> <td>R</td><td>0</td></tr> <tr> <td>S</td><td>0</td></tr> <tr> <td>T</td><td>0.4</td></tr> </tbody> </table>	Compound	Ammeter reading	Q	0.2	R	0	S	0	T	0.4	
Compound	Ammeter reading											
Q	0.2											
R	0											
S	0											
T	0.4											
	<p>Able to construct a table without title:</p> <p><u>Answer:</u></p> <table border="1"> <tbody> <tr> <td>Q</td><td>0.2</td></tr> <tr> <td>R</td><td>0</td></tr> <tr> <td>S</td><td>0</td></tr> <tr> <td>T</td><td>0.4</td></tr> </tbody> </table>	Q	0.2	R	0	S	0	T	0.4	1		
Q	0.2											
R	0											
S	0											
T	0.4											
	No response or wrong response	0										

Question		Details	Score						
1	(b)	<p>Able to state the inference correctly</p> <p><u>Sample answer:</u></p> <p>Molten Q and T can conduct electricity while molten R and S cannot conduct electricity.</p>	3						
		<p>Able to state the inference less correctly.</p> <p><u>Sample answer:</u></p> <p>Molten Q and T can conduct electricity. // Molten R and S cannot conduct electricity.</p>	2						
		<p>Able to give an idea of the inference.</p> <p><u>Sample answers:</u></p> <p>Q / T can conduct electricity. // R / S cannot conduct electricity</p>	1						
		No response or wrong response	0						
1	(c)	<p>Able to classify all compounds correctly.</p> <p><u>Sample answer:</u></p> <table border="1"> <tr> <td style="text-align: center;">Ionic compound</td> <td style="text-align: center;">Covalent compound</td> </tr> <tr> <td style="text-align: center;">Q</td> <td style="text-align: center;">R</td> </tr> <tr> <td style="text-align: center;">T</td> <td style="text-align: center;">S</td> </tr> </table>	Ionic compound	Covalent compound	Q	R	T	S	3
Ionic compound	Covalent compound								
Q	R								
T	S								
		Able to classify at least three compounds correctly.	2						
		Able to classify at least one compound correctly.	1						
		No response or wrong response	0						

1	(d)	Able to predict the two compounds correctly. <u>Sample answer:</u> Q and T	3
1	(d)	Able to predict one compound correctly. <u>Sample answer:</u> Q / T	2
		Able to give an idea of prediction. <u>Sample answer:</u> Ionic compound	1
		No response or wrong response	0

1	(e)	Able to state the three variables correctly. <u>Sample answer</u> Manipulated variable Type of compound // Q, R, S, T // Ionic and covalent compounds Responding variable Electrical conductivity // ammeter reading Constant variable Carbon electrodes // quantity of compound	3
		Able to state any two variables	2
		Able to state any one variable	1
		No response or wrong response	0

1	(f)	<p>Able to state the relationship between the manipulated variable and the responding variable and state the direction.</p> <p><u>Sample answer</u></p> <p>Molten ionic compound can conduct electricity while molten covalent compound cannot conduct electricity.</p>	3
		<p>Able to state the relationship between the manipulated variable and the responding variable but less accurate.</p> <p><u>Sample answer</u></p> <p>Ionic compound can conduct electricity but covalent compound cannot conduct electricity.</p>	2
		<p>Able to state the idea of hypothesis.</p> <p><u>Sample answers</u></p> <p>T / Q is an electrolyte. // R / S is non-electrolyte</p>	1
		No response or wrong response	0

1	(g)	<p>Able to give the operational definition accurately.</p> <p><u>Answer</u></p> <p>Molten compound that cause ammeter needle to deflect when carbon electrodes are dipped into it.</p>	3
		<p>Able to give the operational definition correctly.</p> <p><u>Answer</u></p> <p>Molten compound that cause ammeter needle to deflect.</p>	2
		<p>Able to give an idea of the operational definition.</p> <p><u>Answer</u></p> <p>Compound that can conduct electricity.</p>	1
		No response or wrong response	0

2	(a)	Able to record all the voltmeter readings accurately. <u>Answer</u> Voltmeter A = 1.00 Voltmeter B = 1.60 Voltmeter C = 0.40	3
		Able to record all the voltmeter readings correctly. <u>Answer</u> Voltmeter A = 1.0 Voltmeter B = 1.6 Voltmeter C = 0.4	2
		Able to record <u>one</u> voltmeter readings correctly.	1
		No response or wrong response	0

2	(b)	Able to arrange all four metals in ascending order correctly. <u>Sample answers</u> L, Cu, M, K // L, Copper, M, K	3
		Able to arrange three adjacent metals in ascending order correctly. <u>Sample answers</u> <u>Cu, M, K, L //</u> <u>K, L, Cu, M</u>	2
		Able to arrange two adjacent metals in ascending order correctly. <u>Sample answers</u> <u>Cu, L, M, K //</u> <u>L, Cu, K, M</u>	1
		No response or wrong response	0

3	(c)	<p>Able to state the relationship between manipulated variable and responding variable and the direction correctly.</p> <p><u>Sample answers</u></p> <p>The higher the position of metal in reactivity series, the brighter the flame or glow. //</p> <p>The higher the position of metal in reactivity series, the higher the reactivity of metal with oxygen</p>	3
		<p>Able to state the relationship between manipulated variable and responding variable and the direction less correctly.</p> <p><u>Sample answers</u></p> <p>The brighter the flame or glow, the higher the position of metal in reactivity series. //</p> <p>Position of metal in reactivity series change, reactivity of metal with oxygen change.</p>	2
		<p>Able to state idea of the hypothesis.</p> <p><u>Sample answer</u></p> <p>Position of metal affect reactivity.</p>	1
		No response or wrong response	0
